

FLORIDA DEPARTMENT OF REVENUE

PUBLIC MEETING

VOLUME I: Pages 1 - 115

DATE: Tuesday, October 16, 2012

TIME: Commenced at 9:16 a.m.
Concluded at 4:00 p.m.

LOCATION: 2450 Shumard Oak Blvd.
Tallahassee, FL

REPORTED BY: Tracy L. Brown

MEMBERS :

Marshall Stranburg, Chair

Brian Smith

Gary Resnick

Sharon R. Fox

Alan Rosenzweig

Gary S. Lindsey

Kathleen Kittrick

Charlie Dudley

Davin Suggs

Also Present :

Andrea Moreland

PROCEEDINGS

1
2 **MR. STRANBURG:** Well, I think we're going to
3 go ahead and get started. Good morning everyone.
4 I'd like to convene the fourth meeting of the
5 Communication Services Tax Working Group. My name
6 is Marshall Stranburg and I'm the interim executive
7 director for the Florida Department of Revenue. I
8 will be chairing this meeting.

9 At this time, I'd like Andrea to call the
10 role.

11 **MS. MORELAND:** Charlie Dudley?

12 **MR. DUDLEY:** Here.

13 **MS. MORELAND:** Sharon Fox?

14 **MS. FOX:** Here.

15 **MS. MORELAND:** Kathleen Kittrick?

16 **MS. KITTRICK:** Here.

17 **MS. MORELAND:** Gary Lindsey?

18 **MR. LINDSEY:** Here.

19 **MS. MORELAND:** Mayor Resnick?

20 **MR. RESNICK:** (No response.)

21 **MS. MORELAND:** Alan Rosenzweig?

22 **MR. ROSENZWEIG:** Here.

23 **MS. MORELAND:** Brian Smith?

24 **MR. SMITH:** Here.

25 **MS. MORELAND:** Davin Suggs?

1 **MR. SUGGS:** Here.

2 **MS. MORELAND:** Marshall Stranburg?

3 **MR. STRANBURG:** Here.

4 Before we get started, I'd like to address
5 some of the administrative or housekeeping details
6 for the meeting. This is a non-rule public
7 meeting. It is held under Section 120.525 Florida
8 Statutes. A notice of the meeting was published in
9 the Florida Administrative Weekly on
10 September 28th, 2012 in volume 38, number 39.
11 The meeting agenda and materials are posted on the
12 Department's website.

13 We have a court reporter who is creating a
14 transcript of the meeting today. The transcript
15 will be posted on the working group's web page. If
16 you wish to speak today and you are present in the
17 room, please provide a completed speaker card to
18 Lynne Moeller or Jamie Peate. Lynne. And Jamie is
19 in the back. Speaker cards are located on the side
20 counter. Before speaking, please state your name
21 and the organization you represent.

22 We have created a web page on the Department
23 of Revenue's website for the working group.
24 Agendas, meeting materials, transcripts and other
25 information relevant to the working group will be

1 posted to the website. We do have some hard copies
2 of today's meeting materials available on the side
3 counter. If you would like to receive updates
4 about the working group by e-mail, please provide
5 us with your e-mail address. A sign up sheet is
6 located on the side counter. Please be aware that
7 your e-mail will be considered a public record and
8 subject to disclosure if requested.

9 If you are participating in today's session
10 using WebEx, please do not mute or unmute your
11 phone during -- using the instructions given by
12 WebEx's automated system. To ensure today's
13 session goes as smoothly as possible, our staff is
14 managing the WebEx mute and unmute feature. For
15 those using WebEx, you should see a telephone icon
16 next to your name on the computer screen. If you
17 wish to make a public comment, please click on the
18 hand icon located below the participant panel list.
19 Our staff will let the facilitator know you have
20 your hand raised so you can be called upon to
21 comment. Those not using WebEx can make a public
22 comment by sending an e-mail to
23 CSTworkinggroup@DOR.state.FL.US. Again, that's all
24 one word, CSTworkinggroup@DOR.state.FL.US. In the
25 subject line, use CST working group. Please keep

1 your comments brief, your e-mail will be printed
2 and read into the record.

3 We ask that you please turn off your cell
4 phones or place them on vibrate. The meeting is
5 scheduled for all day today. We will be taking
6 breaks throughout the day and a lunch break around
7 11:30. We have another meeting that is being held
8 in the room that is just directly across the hall,
9 so we ask that you please be considerate during the
10 breaks and lunch hour when exiting this room, that
11 there is that meeting going on next door.

12 Restrooms are located in the hallway that runs
13 directly behind our room. The men's room is
14 located at the west end of the hallway, the lady's
15 room at the east end. Vending machines are located
16 at the rest end of the hallway right beyond the
17 double doors. Areas that are closed off to the
18 public should be designated. This is a secured
19 facility, so please stay in the main areas.

20 One of our members, Brian Smith, has got to
21 leave today around 3:15 today to catch a flight, so
22 please keep this in mind as we work through our
23 agenda. After Brian leave, if there's anything
24 that requires any kind of vote or final action, we
25 will either defer that action to the next meeting

1 or if Brian's able to continue to participate
2 through telephone, we'll have that as an option
3 available. Again, we can continue discussions on
4 things after Brian has left if need be at our next
5 meeting, but I think our -- the decision is we're
6 not probably going to do anything once Brian has
7 left in the way of taking any kind of official
8 action, any kind of votes or things of that nature.

9 Does anyone have any questions before we get
10 started?

11 I guess for purposes of our attendance role,
12 Mayor Resnick is here now.

13 **MR. RESNICK:** Sorry I'm late. 20-minute walk.
14 But it's fine. Thanks.

15 **MR. STRANBURG:** Okay. We've got a couple of
16 follow-up items from our last meeting. They are
17 under your materials as agenda item number two.

18 I'm sorry, I'm stepping ahead of myself.
19 Agenda item two, our meeting minutes from our
20 previous meetings. We have the meeting minutes
21 from the meeting that was held in July,
22 July 25th, and also the meeting minutes from our
23 August 21st meeting. Does anyone have any
24 changes that they wish to recommend be made to the
25 minutes? You know, we can either take a couple

1 more minutes for you to look them over, or if you'd
2 like, we can maybe come back and approve them right
3 after lunch. What's your preference? If you'd
4 like a little more time to look at them? Okay.
5 Why don't we do that. We'll defer approving the
6 minutes until after lunch so that over the lunch
7 break, if you would, we'd appreciate it if you
8 would take a few minutes to look at those and see
9 if there's any recommended changes that need to be
10 made.

11 All right. Moving on to agenda item three.
12 We had some requests for some additional
13 information made at our last meeting. That
14 information is contained in the materials that are
15 noted as agenda item three. One of those where
16 there was a request for information on franchise
17 fees imposed on cable companies and applicability
18 of those franchise fees other services, Charlie
19 Dudley provided us some information on that.

20 Charlie, do you want to make any additional
21 comment about that information or does anyone have
22 any questions about that information for Charlie?

23 We were also asked if we could provide
24 potential revenues from the position of a
25 franchises at a 5 percent rate. Mayor Resnick

1 asked us to provide some information on that.
2 We've attached that as well. Please note in
3 looking at that, there were some assumptions our
4 folks had to make in order to come up with those
5 numbers.

6 Does anybody have any questions about the
7 estimates?

8 **MS. KITTRICK:** Can you tell me which providers
9 you used in base for the estimate?

10 **MR. STRANBURG:** That would be confidential
11 taxpayer information, so I'm not able to do that.

12 **MS. KITTRICK:** -- companies? Did you include
13 wireless companies?

14 **MR. STRANBURG:** I believe if you look at that,
15 we used -- if you look at the paragraph that's
16 titled methodology, the services were assumed to be
17 those services of land line and cable services.
18 But as you look down through the cautionary
19 materials as well, there's no way to break out if a
20 provider that we believe was a landline or cable
21 service also provided other services. It would be
22 hard from the information we have to distinguish
23 what would be those thing that franchise fees might
24 be applicable to, and other services that franchise
25 fees might not be applicable to. So again, it's

1 the best estimate we could come up with given the
2 data we had.

3 **MS. KITTRICK:** Uh-huh.

4 **MR. RESNICK:** So can you -- is someone going
5 to go through some of these numbers at all or --
6 can you just look at -- just so we're understanding
7 what we're looking at, look at one specific year
8 and give an indication --

9 **MR. STRANBURG:** Would you like some of our
10 people who put this together to talk a little bit
11 about it? Okay. We could get Bob McKee, our chief
12 economist at the Department, to come up and maybe
13 give a little discussion and answer any questions
14 you might have.

15 **MR. MCKEE:** Good morning. I'm Bob McKee with
16 the Department of Revenue. I'll be happy to take
17 questions on it. I think Marshall talked about the
18 methodology. He gave a fair description on
19 methodology. We had to look at communication
20 services tax receipts, try to identify those
21 providers who have a presence in the right of way.
22 So there was effort to take those out, who would be
23 providing services that did not have right of way
24 access. And then looking specifically at their CST
25 tax base and applying a -- the 5 percent. So it

1 was not making any other assumption about what was
2 the taxable base under franchise fee scenario just
3 working with the existing CST base, the 5 percent
4 rate for essentially a subset of providers that are
5 paying CST today. And it's really -- when you look
6 at it, compare it to the local government revenues,
7 about 800 million, effective rate at about
8 5 percent, I believe the number were slightly than
9 50 percent of those numbers.

10 **MS. FOX:** So in essence, you're saying they're
11 overstated? Because if you're using the current
12 base and there are some providers that provide --
13 that provide, let's say wireless services as well
14 as landline services, then it would be an
15 overstated base from a franchise fee perspective?

16 **MR. MCKEE:** And I think there are some notes
17 that -- I think the way I put, Ms. Fox, is that
18 should there be services that don't pertain to the
19 right of way, then that would result in an
20 overstatement. There's things that might result in
21 an understatement as well. My recollection about
22 franchise fees were that they were individually
23 negotiated bases, that there were other things that
24 at least historically may have been included in
25 those negotiated bases, than things that are a part

1 of the CST base today.

2 So whether the world will turn to at a place
3 where franchise fees were negotiated, whether those
4 bases would resemble the CST base or not, is just
5 not there. We weren't given the specific scenario
6 under which franchise and the parameters under
7 which franchise fees came back. So we tried to do
8 as close a comparison as we could with the data
9 that we have and the information we received off
10 the returns. Which the only part that really lent
11 itself to this analysis is the identity of
12 collecting it.

13 **MS. FOX:** Thank you.

14 **MR. LINDSEY:** So the idea here was really just
15 looking at kind of a what if. If you took the
16 base, applied a franchise fee, it made no attempt
17 to then look at the CST and say what you might do
18 to the CST to reduce it or to carve something out
19 of the CST, this was really just an inquiry to see
20 what kind of revenue that would generate if
21 franchise fees were to be --

22 **MR. McKEE:** Yes. For those specific providers
23 with presence in the rights of way.

24 **MR. LINDSEY:** Thanks.

25 **MR. RESNICK:** Did you go back historically to

1 look at what franchise fee revenue was before CST?
2 Because the CST was supposed to be -- one of the
3 replaced revenue sources was franchise fees, so did
4 you look at what it was before it was replaced?

5 **MR. McKEE:** The short answer, I guess, would
6 be, no, we did not look back at the replacement
7 revenues. There were certain information that were
8 reported back in 2000 when the switch took pace,
9 prior to that, there wasn't a separate reporting.
10 Franchise fee revenues weren't reported to the
11 Department, they reported in a broad category, I
12 believe, to financial services. But not something
13 that was simply identifiable. And my understanding
14 of the scenario that we were given didn't match up
15 entirely with the replacement revenues. My
16 understanding of the replacement revenue at that
17 time, cable franchise fee was a maximum of
18 5 percent, but that the telecommunication franchise
19 fee was a 1 percent franchise fee. This analysis
20 looked at a 5 percent franchise fee for every one
21 that was in the rights of way. So my understanding
22 of the assignment we received at the last meeting.

23 **MR. RESNICK:** Not on internet service, though?

24 **MR. McKEE:** We looked at the existing CST
25 base. So we did not get into an issue of whether

1 there were services that may not be subject to the
2 CST but that might be able to be pulled into the
3 franchise fee. We didn't examine where the edge of
4 that is, nor did we make assumptions about what
5 type of revenues that were legitimate. It was just
6 a straight up CST revenues, 5 percent application.

7 **MS. KITTRICK:** I have a question. Before
8 reform, wireless didn't pay the franchise fee, but
9 after, the 5 percent franchise fee was baked into
10 the CST rates, there revenue raised from wireless
11 at that point presumably, right? So wouldn't the
12 CST revenues over the last ten years be higher
13 because that 5 percent franchise fee was based on
14 the CST rate? Doesn't it now apply to wireless?

15 **MR. MCKEE:** There were a number of replacement
16 revenue sources across -- and I guess specifically
17 talking about local governments here. For
18 non-chartered counties, the primary source was
19 cable franchise fee, the 5 percent. But for
20 chartered counties and municipalities, there was
21 also the public service tax, whether it's a
22 10 percent or 7 percent option which applied more
23 broadly. And my understanding is that prior to the
24 CST, that that applied to the wireless service. So
25 there was a 7, 10 percent option.

1 And that's -- when you look at the rate
2 structure for the current CST, the current rate
3 structure difference between non-chartered counties
4 with a 1.6 CST proper maximum rate compared to the
5 5.12 potential maximum rate for non-chartered
6 counties. And for chartered counties and cities.
7 So I think there's some reflection from the history
8 in the current rate structure for some of those
9 differences going back into the prior one.

10 **MS. KITTRICK:** Okay.

11 **MR. McKEE:** Questions?

12 **MR. RESNICK:** You also said in your notes here
13 that you did not include total revenue, only the
14 communications revenue. So you didn't include ad
15 sales, other revenue sources.

16 **MR. McKEE:** Yeah, we did not look beyond
17 essentially the CST base.

18 **MR. RESNICK:** Because that's all you --

19 **MR. McKEE:** That's a battle we have available
20 to us.

21 **MR. RESNICK:** For ad sales now from these
22 companies, I mean, is there a tax on it? Based on
23 CST, is there sales tax on that or some other tax
24 on that?

25 **MR. STRANBURG:** No, there's no tax on

1 advertising services.

2 **MR. RESNICK:** Wow. That's a few billion
3 dollars that the state's losing.

4 **MR. STRANBURG:** To the extent they may be a
5 corporate taxpayer, that revenue may be included in
6 some -- incorporated in the corporate income tax.
7 But probably since 1987, there's not been a sales
8 tax on services.

9 **MR. RESNICK:** Would there be a way to
10 determine what type of fees or taxes were on that
11 service before -- because franchise fees generally
12 included revenue from ad sales. So would there be
13 some type of historical data that would have that
14 kind of information?

15 **MR. MCKEE:** I think when we look at historic
16 collections, some of the challenges with working
17 with pre CST data from my office's perspective is
18 that, one, the instruments were different. So
19 they're individually negotiated instruments. So
20 the degree to which things might have been included
21 or not included in the franchise fee makes them
22 non-consistent. And so comparability becomes a
23 challenge across the base.

24 The second is the revenue stream because other
25 than when we had the reported revenues from the

1 replacement period calculation, the rates, to my
2 understanding, we don't have a consistent stream of
3 historic revenues specifically associated with
4 franchise fees across the various jurisdictions in
5 the state. So it creates some challenges. And
6 then once we -- if we have those, it would then be
7 a matter of being able to separately identify
8 what's in each agreement. And then, only then if
9 we're able to, you know, get some idea of how much
10 ever those dollars are associated with the various
11 pieces. My expectation is that checks came in to
12 the local governments without necessarily the
13 accounting for how much of the revenue went to
14 various places. Now that could be a bad
15 assumption. But without something -- I mean, there
16 might be ways to look at available national data or
17 other things or other attributed amounts to try and
18 derive an estimate. Getting it from historic
19 collections, I'm just not aware that that is
20 available to allow us to really tease that out.

21 **MR. RESNICK:** I mean, it would be available,
22 you'd just have to go to do work to get it.
23 Because especially large jurisdictions do audits,
24 so there's definitely accurate information from
25 prior to CST as to what amounts from what pots were

1 going into the franchise fee, probably Tampa. I
2 mean, you name the large jurisdictions, I'm sure
3 they do audits.

4 **MR. MCKEE:** Do you know if those audits are
5 confidential?

6 **MR. RESNICK:** No. Totally public information.

7 **MS. FOX:** The one thing I would say about that
8 is that a lot of those jurisdictions may no longer
9 have that data because it's quite old. And storage
10 costs. So things that go beyond the storage
11 requirements of the state would not necessarily
12 be -- particularly something that no longer is
13 relevant to current statute.

14 **MR. STRANBURG:** Any other questions on this?

15 Thank you, Bob, appreciate that.

16 And the third follow-up item from the previous
17 meeting deals with a request that Mayor Resnick
18 made about some discussion or information on the
19 issue of competitive advantages between the cable
20 and the satellite industries. What we've done is
21 due to pending litigation on that issue, we've
22 given you copies of some of the pleadings from that
23 pending litigation. And that's been one of the
24 reasons why we really haven't delved into that
25 topic a great deal was because of the pending

1 litigation that's the ongoing. It's been ongoing
2 since 2005.

3 You know, information about the litigation has
4 been in the significant litigation report that is
5 part of the -- handbook every year. I believe that
6 cases have been in since 2006. So, you know, it
7 was going to be difficult if not impossible really
8 to discuss the issue fully given the fact that this
9 is something that is in litigation. And I think
10 we've got the potential either benefits or
11 jeopardizing one side's argument or the other by
12 presentations and statements that could be made
13 here, so that's the reason why we stayed away from
14 having a broad discussion of that due to pending
15 litigation. And as I said, we've included copies
16 of some of the pleadings.

17 Right now, the last pleading is the
18 Department's motion for summary judgment. If there
19 are additional pleadings or further developments in
20 the case, we'll bring them to your attention during
21 this group's effort. But at this point, I think we
22 were all feeling a little reluctance to really dive
23 into this issue because of the pending litigation.
24 And I think can you understand that, Mayor Resnick,
25 why there was some concern about that.

1 So hopefully that will give you some
2 background information. You know, for those of you
3 who may have followed this, you know there's been
4 litigation in other states that's been ongoing that
5 is currently ongoing. So there's some other cases
6 you could look at from other states and pleadings
7 in cases in other states if you also wanted some
8 more information on this particular topic.

9 Don't know if anybody wants to add anything
10 more to that.

11 Okay. If there's no additional questions on
12 that, we'll move on to the last follow-up question
13 we had. Davin had asked at the last meeting if we
14 could possibly reach out to the legislature to find
15 out if they had some insight they could provide us
16 regarding the procedures of the working group.
17 We've had some discussions in previous meetings
18 about whether we should go forward with all the
19 options that the working group comes up with, with
20 only a certain number of options, we need to look
21 for some type of majority, super majority consensus
22 among the group in order to move something forward
23 as an option in the report. So we reached out to
24 the sponsor in the House of this legislation and
25 the sponsor in the Senate of the legislation to get

1 their input on what they felt would be a benefit
2 to have provided to us. And so we contacted their
3 staff who spoke with their representative bosses.
4 On the House side, Representative Grant. And of
5 the Senate, Senator Bob --

6 We got two clear messages back from them. One
7 was a request that we capture in our report all
8 options that were brought forth by the working
9 group members. But they also requested that we
10 provide an indication of those options that have
11 broad support from the members of the working
12 group.

13 So what we're proposing to do is to have in
14 the body of the working group report, options that
15 have a broad consensus of support. And I think
16 that broad consensus of support, a number that
17 works well is six members. Because that either
18 gives us three from both sides of the table or at
19 least all from -- four and two from the various
20 sides of the table. And that we indicate those
21 options that have that level of support. Also,
22 indicate those options that at least have a level
23 of support among at least half of the members of
24 the working group, indicate that in the body of the
25 report as well.

1 And then otherwise, include the other options
2 that were put forth by members but that did not get
3 that level of support of at least half of the
4 members of the group, we would just include those
5 as an appendix to the report so that they would be
6 included so that we would be fulfilling both
7 requests that were made of us to give an indication
8 of all options but also give an indication of those
9 that had broad support from the working group
10 members.

11 Anybody have any questions on that?

12 **MR. SUGGS:** Thank you for reaching out.

13 **MR. STRANBURG:** We appreciate that.

14 What we've got on the agenda for today, then,
15 is to take a look at the options and start working
16 through them. I want to thank everyone who
17 submitted their options. We appreciate the work
18 you put into those. And what we attempted to do is
19 to try to capture those options in some categories
20 and to set them out. And that is the -- y'all were
21 provided a list today of those options. We want to
22 make clear that these were just our best effort at
23 trying to capture them into one document and to put
24 them in a very short and succinct statement of
25 them. Please, we have no pride in authorship in

1 this. If there's something you feel that we've
2 left that's very important that needs to be
3 considered or if we've missed something with
4 respect to an option that one of you submitted,
5 please, as we're working through them today, let us
6 know, bring that to our attention. We want to be
7 sure that we are capturing the essence of what you
8 have put forth. Because what we would like to do
9 today is to start looking at these, see where we've
10 got some options that are similar, that there seems
11 to be a couple of members that have submitted
12 something that looks to be alike. Eliminate some
13 of those repetitive options. See if we can
14 consolidate some options. Or see if there's some
15 options where we need to keep them broken out as,
16 while it may be like, keep them out as two separate
17 items for the group to consider and then put them
18 in a format where we can then have them available
19 for the group to then determine what level of
20 support those options have for members of the
21 working group.

22 Then I think what we would look at is after we
23 have that option fleshed out, either we can have
24 the member that submitted it, or if the preference
25 is to have Department staff work on it, maybe work

1 on a brief paragraph or two summary of what that
2 option is about to capture the relevant main points
3 of the option, then we would, at the Department, go
4 back as we've had some requests made of us to try
5 to take a look at, is this likely to have some type
6 of fiscal impact if this option would be one that
7 would go forward and be adopted.

8 And I think our perspective and our ability to
9 do that, we're going to be limited in what we can
10 do because most of these options are not going to
11 have precise statutory language that we feel would
12 be necessary in order for us to try to attach a
13 specific dollar amount. And even when that is
14 looked at in the process in Florida, it is not
15 something the Department does. There's a whole
16 separate process that's handled by a consensus
17 revenue estimating process, actually put a number
18 on legislative proposal.

19 So what we feel is probably the best thing we
20 can do is we can give you all some type of
21 potential fiscal magnitude option kind of
22 discussion that we could say that we think it's
23 likely to have a broad area of application, and it
24 has the potential to have a significant revenue
25 impact, a minimal revenue impact, something of that

1 nature. But trying to put an exact dollar amount
2 into it, I think we don't feel as though we've got
3 any confidence that we will be able to do that.

4 Davin?

5 **MR. SUGGS:** Right. I understand what you're
6 saying, but I think depending on our time line, if
7 we produce something and we really want to analyze
8 it, we can request a date maybe in a week and we
9 can submit this.

10 **MR. STRANBURG:** Certainly.

11 **MR. SUGGS:** And just for the benefit of the
12 group, the group that he's talking about if we
13 asked them to put something together, they can meet
14 and analyze -- since they're an official group that
15 puts a number on stuff.

16 **MR. STRANBURG:** We were looking at this, too,
17 from the perspective of before asking the members
18 if they felt as though there was some support that
19 they could indicate for an option, that they would
20 like some idea of whether this may have a
21 significant -- whatever that revenue impact might
22 be without getting into an official number. So
23 we'd like to have the opportunity to do that before
24 we would ask the members to indicate whether they
25 thought an option was something that they could

1 support, that they'd have some indication from us
2 that this looks as though it may have this kind of
3 magnitude of a revenue impact, whether it's a
4 positive, a negative, whatever that might be.

5 **MR. ROSENZWEIG:** The way our language reads on
6 our responsibilities, that language I keep going
7 back to, unduly local governments. Are you also
8 looking at the impacts of the state or just
9 strictly looking at the local government?

10 **MR. STRANBURG:** I think we would look at what
11 the overall revenue impacts would be, so that would
12 cover both the state and the local governments.

13 **MR. ROSENZWEIG:** Can you give us an
14 indication, though, state and local at least while
15 you're doing your language?

16 **MR. STRANBURG:** I think we'll do the best we
17 can.

18 **MR. ROSENZWEIG:** But we don't need numbers but
19 just -- Bob just needs to say, hey, it's going to
20 hurt you or it's not.

21 **MR. STRANBURG:** Yeah. I think that is what
22 our intention would be is to do that. Again,
23 whether it's our best estimate, whether it may
24 have, you know, it looks as though this would apply
25 to a broad number of providers which might have a

1 greater likelihood of having the higher revenue or
2 lower revenue impact.

3 **MR. SUGGS:** Ask a question about time line.
4 How much time do we have -- I mean, how many -- I
5 know we have another meeting this month, but then
6 what else is potentially planned?

7 **MR. STRANBURG:** I think what our plan had
8 been, if you'd even go back originally to at your
9 first meeting, I think the plan that Lisa, when she
10 was chairing this group, was to have a last meeting
11 potentially be that October 31st meeting, and
12 that a report would be ready or pretty close to
13 being ready. I don't think we're going to hit
14 that. I think what we're more likely have to do is
15 to probably at that meeting on the 31st, that
16 would be a point in time where we might start
17 seeing what level of support any of these options
18 might have and take some -- whether you want to
19 call it a vote, whether you want to call it a test,
20 what that level of support would be, then we would
21 be putting together the report after that including
22 those -- as I indicated, those that had that
23 significant amount of support. And then probably
24 sometime thereafter, maybe towards the end of
25 November, beginning of December, hopefully we would

1 have that report together to disseminate out to the
2 members for them to review and then we would have
3 another meeting. I think that meeting possibly
4 could be done by phone rather than in person to
5 indicate the group's agreement to move that report
6 forward to the legislature.

7 I'd like to also put on the table as part of
8 this process, too, that once we've gone through and
9 had that opportunity to work on these options, get
10 the feel of the group about the level of support
11 for the options, what's going to be those options
12 included in the report, those that would be part of
13 the appendix of the report, to allow the individual
14 members if they wish to submit something in the way
15 of a statement or an opportunity to present their
16 view maybe of what they felt about an option or an
17 option that may have not been put forward as one
18 that had significant support. Allow the members to
19 have an opportunity to put forth their viewpoints
20 about some of the options as well as having a
21 report that contains information on what the group
22 did.

23 So I would envision again, given that, we're
24 probably looking at sometime in the December time
25 frame to get some of this done, put together, send

1 it out, and then reconvene to then have the group
2 give its final okay for moving that report on to
3 the legislature.

4 Any questions on that or anything else we can
5 help you understand?

6 **MR. SUGGS:** Can I ask the group something?

7 In terms of government or industry, is
8 everybody comfortable where it has a good general
9 sense of where everybody's at? And the reason I
10 ask that, I think, given the time frame that
11 Marshall just went over, I think if everybody was
12 comfortable where -- I mean, from looking at the
13 stuff and knowing what my folks said and our policy
14 conference, I think we're real close in the area of
15 we could get a consensus on some stuff if we kept
16 it simple at this point. It's just a recognition
17 of, I guess, everybody's goals and, I guess, from
18 the industry side, how fast is the time line?
19 Because there's a big difference if this group
20 produces something that keeps things moving forward
21 in the right direction versus, do you feel we have
22 to solve all 100 problems in the next two or three
23 meetings and by phone and get it to the
24 legislature. I.e. hypothetically if this group
25 recognized on a consensus basis that there needs to

1 be some significant change and here's how we need
2 to continue as a Board addressing that change. And
3 sort of define that. I mean, working within our
4 time line, that may make our discussion easier. I
5 think that's more approvable than moving, shifting,
6 rates changing, technical administrative stuff in
7 the next three or four meetings at a very detailed
8 level.

9 I don't know, does that make -- I guess the
10 initial questions, is everybody, especially in the
11 industry or you guys, is everybody comfortable with
12 everybody's position to where we can go into that
13 discussion or does there need to be sort of general
14 elaboration on where everybody's at?

15 **MR. LINDSEY:** Seems to me as far as positions,
16 I mean, we've laid out the options. I think we do
17 need to have, I imagine what we'll do today, a lot
18 of the discussion about looking through these
19 options. And I think part of that is trying to
20 determine additional observations about the
21 options. You know, each one of us may have
22 outlined some things about a particular option,
23 others may have some other insight on it. You
24 know, that option -- one of the limitations of this
25 option is this. Here's another thing, another

1 attribute that we need to consider, et cetera. So,
2 I think we need to do that. I think that's just
3 kind of a natural way that we need to go through
4 it.

5 And when we start looking at the ones that
6 have the above 50 percent, you know, and we all say
7 the state-wide rate looks good -- I'm just picking
8 one as an example -- and that has broad support as
9 an option, then maybe we spend a little more time
10 on elaborating on that one. And the ones that we
11 weed out that might end up in the appendix, we
12 don't. So I think we kind of end up doing -- if
13 I'm understanding, I think that's kind of what
14 we're going to end up doing probably today. We'll
15 a pretty good idea probably in a few hours.

16 So I'm not sure if you were suggesting we go
17 ahead and start voting on these, but I think we
18 need to talk through them.

19 **MR. SUGGS:** No. I'm not talking about voting
20 on them right now. I mean, essentially here's what
21 I'm asking the group is: How much of this problem
22 do we need to solve for you -- I'm looking to
23 industry? Is this something that needs to be -- we
24 put something forth and it needs to be solved
25 between March and May of 2013, this session coming

1 up? Or knowing that there's a general consensus
2 that there's a major change and overhaul that needs
3 to be done, what is your time frame in the process?
4 Could this extend or were you inclined to
5 whatever -- into next summer and getting it done
6 correctly but meeting all your overarching goals?

7 **MS. KITTRICK:** I mean, I think there's a lot
8 of things on the table that are really big-picture
9 items that would be unlikely to get done now. I
10 think from our company's perspective, the prepaid
11 issue has to be addressed this year, like this
12 session. I think that, you know, the funding
13 structure for local governments and, you know, the
14 bonding issues, I mean, those are big issues.
15 Those are big issues that I don't know that we can
16 address by ourselves with this group. I mean, I
17 think they're going to be hard issues. I don't --
18 I don't know that --

19 **MR. SUGGS:** I agree with you. And see
20 where -- like where our conflict in our policy
21 meetings, we don't see how the state can address
22 prepaid until they address us. Because I told our
23 members, I said, I mean, we think we're part of the
24 problem -- in terms of we just talk -- counties and
25 say there's 67 different rates. That's part of the

1 issue the state has to figure out. But I think the
2 two are connected. The ability to broaden the base
3 and the ability not only protecting our revenue but
4 right now our local discretionary authority. I
5 mean, there's more than one way to do it unless you
6 break off prepaid as a separate flat rate, separate
7 and apart and as a separate part. But then again,
8 that makes the CST still more complex because now
9 you got satellite DVS state rate, you got satellite
10 DVS gross receipts. And then you got local CST,
11 and then you're got prepaid hanging after you. The
12 matrix keeps getting bigger and bigger.

13 **MR. DUDLEY:** It was clearly done, you know,
14 12, 13 years ago. It was -- I guess year one was
15 the skeleton and year two was, you know, all the
16 connecting tissue. I mean, year one was the, this
17 is the definitions, this is the structure of how
18 it's going to work. And then year two was a lot of
19 interim work on what the rates need to be from a
20 perspective of the different governmental entities
21 and their bonding issues, the needs, and crunching
22 numbers. And that was done, as you all know, in
23 the interim with a lot of reporting and a lot of
24 meetings that the Revenue Estimating Conference --
25 but if that's what you're suggesting, I think

1 there's some structural stuff you could -- that you
2 need to address at some point. I mean, if you had,
3 for example -- and I'm not saying people are going
4 to agree with this, but if you had a single state
5 rate, that does change the perspective of how you
6 potentially handle prepaid in the long term as
7 opposed to having 470 different distinct local
8 rates. Some issues become bigger, some issues
9 become less, I guess.

10 I still think there's going to be an issue
11 from a policy perspective, and not to mention a
12 political perspective of subjecting a 6 or
13 7 percent service today to 15 or 16 tomorrow. You
14 know, it's going to be an issue well above our pay
15 grade. There's going to be a lot of legislators
16 very interested and the types of people that use
17 those -- customers that use those devices in this
18 economy and what you're doing to them. Regardless
19 of whether it's fair or not fair, the policy of it,
20 again, that's something that we probably can
21 address as options, but it's not something we can
22 solve.

23 **MR. SUGGS:** And I think -- and Charlie and
24 Sharon, you've been here, too, I think the type of
25 revisions or amendments or changes and I think

1 Charlie -- I think we've sort of got to walk slowly
2 because probably the biggest player has not been at
3 these meetings in terms of -- even if we all agree,
4 we've got to go convince the legislature.

5 **MR. DUDLEY:** Oh, sure.

6 **MR. SUGGS:** And we may all understand it and
7 come to understand that consensus, but I think the
8 walk has sort to got to be slow. And you guys have
9 been through it before, so --

10 **MR. DUDLEY:** I think Gary hit it right. I
11 mean, obviously I just saw this two pages this
12 morning that the Department put together. And
13 people may have some issues with how they've been
14 portrayed. But I think we ought to go through it
15 because I think if we go through this two-pager and
16 go down and talk about some of these things, there
17 may be areas that there is majority or consensus on
18 and there may be some that are just very
19 contentious. And that will help us sort them out
20 for our next meeting. I mean, that's kind of --

21 **MR. SUGGS:** And I guess at the end of the day
22 what I'm asking, I know we just -- because until
23 Marshall made that statement, that's why our group,
24 we decided to have a policy conference when -- was
25 handing out this morning. But we were very

1 concerned about sort of the consensus process. So
2 that's why our group was sort of held back until --

3 But our first option was that sort of continue
4 in a more detailed work group. And what's not on
5 here is sort of -- hypothetically, if we could
6 reach consensus on a very narrowly, highly-defined
7 scope moving forward, this group or some group
8 similar to this -- could be larger than that --
9 needs to keep working to fill in. If we put on
10 ourselves, look, we can -- if our recommendation is
11 to keep this group going but here is -- we've done
12 all the prework, here is our narrowly defined scope
13 to reach solutions, A, B, C, and D. The group
14 needs to continue to work to figure out A, B, C, D,
15 I mean, very specific. And I think that we could
16 do that still addressing the goals in this
17 legislature which we're streamlining the
18 administrative system and competitive issues. But
19 we fill in those details of the narrowly defined
20 scope and keep it moving. And I think if you read
21 my statement, number two, I think you understand
22 where the penalties are, that's probably better
23 than what you guys thought where we were going to
24 be, maybe.

25 **MR. DUDLEY:** If it's appropriate, could we

1 maybe start with your statement this morning since
2 we're on it? Because I've got some questions about
3 it.

4 **MR. SUGGS:** Okay. If it's okay with the
5 group.

6 **MR. DUDLEY:** If that's all right with
7 everybody.

8 **MR. STRANBURG:** Let me just add one thing real
9 quickly before we get started. We've got a
10 facilitator here today, Jeff Stachnik, to help us
11 in the process. If we can feel as though he would
12 be of some use to do it, he's a trained
13 facilitator. So as we're starting to talk about
14 things, he can capture them, help us keep moving.
15 I think that would be a benefit to -- have him
16 available so we can call on him as need to be to do
17 that, so --

18 **MS. KITTRICK:** Can I state one thing for the
19 record just before we start?

20 Some of the issues -- in the tab for our
21 options listed as my name is something that our
22 company worked on with the wireless industry, and
23 Gary's company did as well. But Gary and I were
24 not part of those conversations, just so you know.
25 We were not -- we were not invited to any of the

1 meetings. We were not in any way engaged. And, in
2 fact, I didn't see this until it was posted on the
3 website. Just -- I just wanted to make that
4 clarification for the record. Neither one of us
5 were part of those meetings that created this
6 document. Okay.

7 **MR. ROSENZWEIG:** And I obviously need to mimic
8 that from the county's side. Obviously, Leon
9 County is a member of the Florida Association of
10 Counties. I intentionally avoided the policy
11 conference, all their webinars, all the
12 discussions. I have a staff person here in the
13 audience who did attend. And actually I was given
14 these documents -- I mean, I didn't see this until
15 this morning. She briefed me on what was
16 occurring, but I obviously stayed away for all the
17 Sunshine reasons. Which made it pretty complex.

18 **MS. KITTRICK:** Yeah, kind of hard to -- I just
19 want to make that note.

20 **MR. STRANBURG:** Okay. And again, we want to
21 be sure you're aware, you know, there were two
22 things you got this morning. One was the
23 Department put together, the two-page put together
24 of ideas. And then the other one is the one-pager
25 that came from the counties yesterday. Davin, we

1 appreciate you getting that in. I guess if you
2 want to, we can start working through that one.
3 Charlie recommended --

4 **MS. FOX:** I wanted to also indicate that while
5 Mayor Resnick's comments and mine had some overlap,
6 it was purely coincidental as we had no
7 conversation about any of this.

8 **MR. RESNICK:** Great minds think alike. But I
9 guess just for purposes -- I'm sorry, I didn't want
10 to interrupt, but for purposes of DOR records, this
11 should be revised to reflect that they're not
12 Kittrick's comments where it says Kittrick, it is
13 the wireless industry.

14 **MS. KITTRICK:** Or the Telecom industry, yeah.

15 **MR. RESNICK:** Wireless or Telecom.

16 **MS. KITTRICK:** Yeah, it's Telecom.

17 **MR. STRANBURG:** Again, to again clarify, we
18 struggled with that because we did not know what
19 would be the best way to identify it because even
20 though we knew it was coming from the industry, it
21 actually -- you were the person who provided it to
22 us as a working group member.

23 **MS. MORELAND:** No, it came from --

24 **MR. STRANBURG:** It came from -- okay.

25 **MS. KITTRICK:** It came from something.

1 **MR. STRANBURG:** Okay. So --

2 **MR. RESNICK:** You didn't submit comments?

3 **MS. KITTRICK:** No, I did not.

4 **MR. DUDLEY:** While we're on that, Marshall, I
5 will be at an industry tax meeting next week that
6 none of these folks will be at. But their
7 companies will be, so --

8 **MR. STRANBURG:** Why don't we start working
9 down through looking at what the Association of
10 Counties submitted first.

11 Would you like to take it now?

12 **MR. SUGGS:** You guys want to take a break now
13 and then get into this, or do you want to get into
14 it?

15 **MR. STRANBURG:** Or just talk about this one
16 and then -- why don't we get started on this, see
17 how it goes, and then we can maybe take a break if
18 this doesn't take too long.

19 **MR. SUGGS:** Jumping to number two in ours,
20 what I put in, this is normally how -- this is
21 association speak, we -- but I can sort of talk in
22 between the lines a little bit here. Just so you
23 guys know, I contacted Andrea before our conference
24 because I sort of wanted to recreate a mini type of
25 group and have a discussion panel discussion in

1 front of my members so they could get a full
2 editing of the information. In talking with
3 Andrea, it became too difficult in terms of
4 Sunshine laws and in short notice in trying to
5 schedule to have good representation from everybody
6 there. And so what I did, I just sort of took a
7 summary of all of the information we had put
8 together in a presentation. I did it to the
9 members, and we took about two or three hours.
10 Presented sort of factual stuff and then sort of
11 both sides, what caused problems for you all, what
12 our concerns were. And we went through a
13 presentation and discussed it.

14 And one of the slides at the end for us, to be
15 very honest, we put it up -- I put up a slide, and
16 it was just an arrow, one pointed to the left and
17 one pointed to the right. And the arrow that
18 pointed to the left was trying to fix this tax.
19 And the arrow pointing to the right was get out of
20 the tax, find a replacement for some of the
21 different reasons. And then we crafted a policy
22 statement, just sort of reflected gibling the
23 counties both of the options details.

24 And the thinking from my group is there are
25 several issues that we are faced with today that we

1 can try to fix. I mean, our issue, number one,
2 when you see number one is revenue. Maintain the
3 revenue. What is so wrong with this revenue
4 source, what's it going to look like three, four,
5 five years from now? Because none of us in the
6 room believe the revenue estimates and REC for the
7 next five years -- it goes down a little bit the
8 next two years and then it sort of flattens out and
9 goes up and we don't believe that would be -- go
10 down. And so we discussed current issues which are
11 affecting them, like the tax base is not broad
12 enough, there is stuff escaping the tax base. It's
13 not just the exemptions, but prepaid, talk about
14 prepaid and put together the share -- the share of
15 the wireless market to all the land lines, to all
16 the lines in Florida and the share of prepaid of
17 the wireless market. And everybody was like,
18 oh, my goodness, yeah.

19 And then I put up how many different rates we
20 had and some of the problems where I thought that
21 caused although -- and I asked my members, is money
22 our own rule? That's what I asked them.

23 And so, I mean, number one for us at this
24 time, I mean, is maintaining revenue. But it's not
25 just revenue. It's current revenue, revenue

1 capacity. If everybody's not utilized their full
2 rate capacity. And stability, and what -- market
3 base grow. Also the ability -- most government
4 practitioners would rather grow the revenue through
5 market-based growth than raising the rate. There's
6 two components to a tax revenue. There's the base
7 and then there is the rate. We would much rather
8 see the base grow. So we don't like -- and our
9 bosses don't like being in the meeting raising our
10 hands saying vote for a tax --

11 And so, options of looking to fix this tax
12 which are on the table, our guys are serious about
13 that. But then the issue came up of how many time
14 are we going to have to do this? We're going to
15 have to do this every four or five years. Because
16 we discussed it and we're constantly going to have
17 to chase technology. And we're going to have to
18 reconvene in three or four years to try to do major
19 fixes. And so we looked at arrow one to the right
20 which is more now, not that we have any concrete
21 ideas. A lot of the stuff, like Charlie said, is
22 above our pay grade, over our head. This is a lot
23 of conversation with people that aren't in the
24 room.

25 But the arrow to the right was looking for

1 some type of replacement in the future. Something
2 we -- I mean, I used to be a budget director. I
3 know Alan used to be a budget director. Stability.
4 You got bonds out there, number one, it's got to be
5 a good revenue source -- got to be -- tax has to do
6 its job and produce revenue. But for us stability,
7 reliability, predictability, those things are
8 important. So it may not be another revenue souce,
9 we may be stuck in here. It's not saying that we
10 want to get out. We may be stuck in this CST. But
11 for the counties at the conference, paramount is
12 the ability of the CST to produce the revenues that
13 we've grown accustomed to. However we get our
14 strength from it. It has to produce that in --

15 If we're stuck in there short term, short term
16 being the next three to five years, it needs to be
17 fixed in a manner that it continues to produce
18 that. We give it every opportunity to produce
19 that. Some things, I mean -- like I said, your
20 market, your world changes every six months, three
21 to four to five months. But we need to push, we
22 need to put the state in whatever the tax, the best
23 possibility to where we can keep up as much as
24 possible if we're going to stay in it. My guys
25 can't afford anymore to take 10 to 15 percent

1 losses. You know, or even 5, 10 percent losses. I
2 mean, we'd like to see some market-based growth.
3 And the thing is, maybe the problem right now is
4 the tax and not the market. I mean, the tax is not
5 capturing the changes and whatever's going on in
6 the market. The Telecom market is not shrinking.
7 No, it's just changing and evolving and we're not
8 capturing it.

9 So, the message from the counties to the
10 industries is that in terms of any concerns,
11 there's a light at the end of the tunnel. We hear
12 all of that. And we understand your issues affect
13 us because it portrays itself in our -- us losing
14 revenue. And some of the things in the past which
15 were popular ten years ago, they're still popular.
16 I mean, home rule for us is still the number one
17 manifest doctrine of local government. But also, I
18 can't be a hypocrite and complain that I need the
19 ability to provide local services. And I can't get
20 in my own way to jeopardize that type of revenue.
21 So there's got to be some type of mix and balance.
22 So that's what our statement represents.

23 Just real quick, one, I said is whatever we do
24 in the short term here, has got to be revenue
25 neutral for us. That's imperative. And that

1 includes what we get in capacity. And for us, as
2 we try to do that, please keep in mind it's not
3 just the bond, okay, but we got to look at this
4 ballot. And for those of you who are not in
5 Florida, the upcoming ballot in the general
6 election, there's at least eight amendments for
7 property tax or some tax-related type of
8 amendments. If I add all those up over the next
9 four years, I'm talking over \$2 million in revenue.
10 Not base, just revenues. So you know what it will
11 do to the base. And that's impact to counties and
12 cities.

13 But, I mean, you have multiple -- at least six
14 or seven that are directed at local tax. And there
15 might be one or two that get it at the state. But
16 a lot of these carve the state out. Carve schools
17 out. And they're directed at significant -- and we
18 have to look at everything in the big picture. And
19 especially when we're looking at our general
20 revenue, a big portion, property tax is about
21 33 percent and then we add everything else up.
22 We're being attacked on our most major fund. And
23 so for this one, we're willing to listen and work
24 and get to a common goal for everybody, but -- and
25 I told Charlie this last session, I'm not trying to

1 make ten bucks off of you, I'm trying to keep the
2 ten bucks I have. And that -- that's as honest as
3 I can do. But it's varying, just me not want to
4 lose on CST, it's because I'm losing in other
5 places where I know I'm already losing.

6 Two, we understood simplifying administration
7 and the collection of current tax. Part of it
8 might not -- with the situsing and our guys that
9 had to fill out the a little paperwork when it
10 comes in when somebody has moved across the street
11 in between in the city and the county. I'll give
12 you an example, we talk about administration in
13 Broward County. They've got almost 36. I mean,
14 they understand. And they probably all figured
15 they're not getting the right amount. They know
16 there's some slippage there in between the cities
17 and stuff. But they know it is a nightmare. So
18 everybody understands that. They understand that
19 in our attempt to run the base, they've got -- when
20 I talk about Wal-Mart, Target, and everybody else
21 and talk about prepaid cards and -- oh man, Metro
22 PCS is big out there. So they understand that and
23 how the two of them relate. They understand what
24 it does to DOR, too, okay. So that statement
25 number two is we recognize that. To the extent --

1 everything is to the extent we preserve and up --
2 over number one we understand what we can do.

3 Three, we get, is for prepaid and everything
4 else. It covers prepaid, which is one of the
5 broader, equitable tax base. That's prepaid.
6 There's been talk of reducing or removing of
7 certain exemptions like the residential exemption.
8 Things that you can do in terms of your industry
9 sort of puts you guys on an even ground to -- we
10 know there's some unfairness right now with -- I
11 think, when we have the technology presentations,
12 those were helpful. Not only the prepaid ones but
13 I think we had a lady from AT&T came and talked
14 about it. So I know there's other people out
15 there. The RedBox at every gas station, NetFlix,
16 Hulu TV, all of that stuff. Skype, Rega. I mean,
17 it's either we provide a fair and competitive
18 environment, or sooner or later you guys are going
19 to move to where they are. Either you're going to
20 get competitive with them or we can provide a
21 competitive environment and treat everybody the
22 same. And hopefully at the same time, broaden the
23 base and get where we can get in our base and then
24 compare. I mean, I know it's tough to translate
25 between Telecom and video and Tel -- but as much as

1 possible.

2 And then I think two and three sort of go to
3 number four, which is putting this thing in a more
4 stable and reliable position, which for me goes
5 back to number one. These things go back to
6 support number one. The more stable and reliable
7 that we can make this whole environment helps me
8 achieve number one.

9 And then five is, I mean, if we get somewhere
10 close to it being right, and the base is broadening
11 and we capture more folks or more things in the
12 base, then it opens that back up to the market
13 group that you guys really are seeing. Okay. And
14 so hopefully this stuff allows you to be more
15 competitive to people we do have in the base and
16 hopefully it all works. That's sort of what I
17 think right now.

18 And so with all of that, that leaves us. In
19 terms of the counties, a lot of room and discretion
20 to talk but with the understanding that number one
21 is paramount. Satisfying and staying close and
22 recognizing number one gives me a lot of leeway now
23 during session with our members to reach some type
24 of consensus and really work together towards -- we
25 really don't want to be in the way, okay. And we

1 understand that sort of getting out of the way
2 helps. So hopefully -- and so -- and our members
3 and, at this meeting we had about 100 members and
4 my presentation, 100 elected officials. And there
5 was a lot of staff, too. So I had about a third, I
6 had a hundred -- roughly almost -- for our state.

7 And hopefully we can talk a little bit and
8 then we get back together in Sarasota the week
9 after Thanksgiving for our final -- to make this
10 final. Right now this is tentative. I'll report
11 back to them on whatever we decide, and then we
12 meet the 20th or the 30th in Sarasota. And
13 whatever we decide there, that's what we'll take to
14 the session as an association. But I think we're
15 in a pretty good place from your perspective. I
16 think for this group's perspective or for this tax
17 perspective I think right now this is getting
18 pretty good stuff from our members.

19 **MR. DUDLEY:** I have some questions. In number
20 one, you say revenue neutral, does your group
21 define that on an aggregate, a state-wide aggregate
22 basis or a county-by-county basis or what is the
23 test in -- from your folks? Maybe you didn't get
24 this detailed. I'm just trying to understand that
25 perspective.

1 **MR. SUGGS:** It's always both. Because me,
2 because any association work, me -- so if in the
3 first meeting Bob put up a number. Let's say the
4 number is 22 -- we'll just say 275. 275 million.
5 All right, for me, I got to fight it for 275
6 million. Okay. When I get to those meetings, if
7 Broward was 9 million and then Miami-Dade was 25,
8 at the end of the day, that's what they better be
9 bringing home or me would be replaced. But I mean
10 for them, too, it's important because if they've
11 got bonds, their bonds are let on a very specific
12 number.

13 **MR. DUDLEY:** So that test has to occur at two
14 levels?

15 **MR. SUGGS:** Right.

16 **MR. DUDLEY:** One in the aggregate and one
17 jurisdiction by jurisdiction within some, I guess,
18 reasonable test of something.

19 **MR. SUGGS:** And whatever method we get to,
20 what I always tell folks up here in Tallahassee is
21 if, we as the aggregate group, have been producing
22 or receiving 275, 280 or whatever the number is --
23 let's get the aggregate number right first. And
24 then if we got back into it -- to make sure that
25 the right amount got back to everybody. That's --

1 I would never get two right, I would only get one
2 right. If I don't to 280, I can't get you back.
3 And so I always go aggregate and then go detail
4 from this perspective of where I am. And you asked
5 Alan, Alan cares about his 4 million bucks. He
6 doesn't care --

7 **MR. ROSENZWEIG:** That's where we will diverge
8 this conversation because believe me, this policy
9 statement's good at some point.

10 **MR. DUDLEY:** I understand. Then, I guess one
11 small complexity I guess we have to keep in mind
12 and I didn't know how it affected your group was
13 several years ago, the legislature decided to take
14 some of the DirectTV from the DVS money and give it
15 to the rural counties on a different ratio than
16 they distribute it to the other counties. I don't
17 know the details of that. I just know that there's
18 a pretty significant chunk of that money, I
19 understand, that goes to certain counties that are
20 designated maybe as rural areas of critical --

21 **MR. SUGGS:** Fiscally constrained counties.

22 **MR. DUDLEY:** I guess there's a statutory list.

23 **MR. SUGGS:** Fiscally constrained counties are
24 counties -- we look at our mils and our property
25 taxes, pretty much if you can't generate \$5 million

1 per mil. It's a threshold of what you can
2 generate, and roughly there's 28 or 29. It
3 fluctuates because we have counties on the fringed,
4 based on property values will go up and down. I
5 think the highest it's ever been is 32. It might
6 be about 29. And, Bob, you can correct me, that --
7 their distribution comes from the half cent. But
8 you want to explain how whatever satellite money
9 flows into that pocket and then flows into their
10 distribution?

11 **MR. DUDLEY:** I just wanted to understand that
12 issue --

13 **MR. SUGGS:** I think, Bob, were you at --

14 **MR. ROSENZWEIG:** It's a distribution formula
15 issue.

16 **MR. DUDLEY:** Right.

17 **MR. McKEE:** This is operating some on -- or
18 mostly on memory, so --

19 **MR. SUGGS:** Your memory --

20 **MR. McKEE:** Put that out there first.

21 Out of the 13.17 that is applied to
22 direct-to-home satellite, there's 4 percent of the
23 tax that is distributed to local governments.
24 There's -- I believe, of that 4 percent, I think
25 it's 70/30 split. 70 percent of that 4 percent

1 goes into the half-cent revenue sharing and is
2 distributed to all local governments proportional
3 to their, I believe it's a prior year half-cent
4 distribution. The other 30 percent of those
5 revenues, which I recall to be about 17, the
6 magnitude of about 15 to \$18 million, goes to the
7 fiscally constrained.

8 Now, prior to the law change, which was in
9 2006, that full 4 percent went through the
10 half-cent distribution to all local governments.
11 In 2006, 30 percent of it was split off and
12 directed to the fiscally constrained. It's a
13 separate distribution formula that's based on
14 essentially revenue rates and capacity within those
15 local governments. It's based upon the millage
16 that they levy -- I'm trying to remember the other
17 factor. There's a factor for number of mils. And
18 I believe there's a factor for amount of revenue
19 that can be generated, I believe, is how the
20 factors work to distribute the monies among the
21 various eligible fiscally constrained counties.

22 **MR. DUDLEY:** So I mean, just something to keep
23 in mind, but I guess from a distribution standpoint
24 so there's -- the legislature has a track record of
25 tweaking distribution formulas in order to address

1 inequities or needs. Just something to keep in
2 mind if there's ways that it's been done and can be
3 done, you know, to address both the aggregate
4 revenue neutrality concerns as well as potentially
5 regional or unit-level revenue neutrality tests,
6 right?

7 **MR. SUGGS:** And we've seen it done before, and
8 I think our first job is to focus on the big
9 picture and get into the details. Either we've
10 done it, or there's been people before us that --
11 for a lot of the stuff, a lot of the stuff isn't --
12 even now with this tax --

13 **MR. DUDLEY:** I just wanted to put that out. I
14 appreciate that.

15 **MR. SUGGS:** I guess in summary back to number
16 one, I guess my initial question is not
17 explaining -- and this is the county's viewpoint.
18 I think I've got my folks come a long way over the
19 last -- but, it's still a process that's got to
20 take one step at a time. And that's why I put
21 number one, option number one, which is to continue
22 in this group with a more defined scope. I think
23 I've given you enough from the counties to know
24 that if we sat down and said, for the next three
25 meetings, let's define that narrow scope of changes

1 that this group will continue to work on, we could
2 probably find some type of consensus. But I think
3 it's got to -- and I know the issue of prepaid
4 is -- look, prepaid is hurting me just as much.
5 Prepaid not being is hurting counties just as much
6 as, from the competitive issue is hurting you,
7 because it's killing my 911 rates with no solution
8 for people --

9 **MS. KITTRICK:** But I think we're working on
10 that.

11 **MR. SUGGS:** Right. And they've called me and
12 they said they're working. So finding a solution
13 for prepaid is imperative to -- for county
14 governments. Because right now all money we're not
15 getting for emergency communications, we're having
16 to backfill which we don't have. And -- but we
17 take this thing slowly, and I just -- throughout
18 the day, really considered keeping this group up.
19 And I think we would find much more progress
20 getting the solutions here and crafting them to a
21 certain point before we take them into the global
22 process.

23 **MR. DUDLEY:** Well, I think to that point, and
24 I know the Department reached out to the bill
25 sponsors, one of whom will definitely be back and

1 the other one still has an election. But, you
2 know, for those of us that wear multiple hats here,
3 we will have a whole new lineup after elections.
4 And November 20th, when they organize the chambers,
5 we will probably get chairs of the tax and budget
6 committees that will be focusing on these issues.
7 And, you know, they will finalize all the staffing
8 of those committees. And, you know, historically
9 when we've moved from having these types of
10 discussions or reports to more of a legislative
11 centric process, which obviously will have to occur
12 here in this one area. And in the new year, you
13 know, you'll want to know where the presiding
14 officers and their chairs that have been assigned
15 to these areas, how they'd like to handle the issue
16 and how often, you know, that they want their
17 staffs -- you know, if they want this to be a
18 process driven by their committee staff and their
19 committee members or driven outside of that. And,
20 you know, I just kind of feel like at some point,
21 that we have to produce the best report we can with
22 options, develop as much consensus and
23 recommendations as we can, not leave anyone's
24 opinion out like we've talked about here today.
25 And at some point, we're going to have to find out

1 from those folks, you know, after they've digested
2 the report, how they'd like to go forward. And,
3 you know, historically they've welcomed input from
4 interested parties and had a very open process of
5 people working with them and their staffs on how
6 you go from, you know, consensus in certain things
7 and maybe not in others and how that -- process,
8 whether it's done in one year or done in two years
9 or whatever.

10 So, I mean, I don't think we're on different
11 pages. I think it's just a bit of a timing issue
12 in my mind of finishing this charge and then moving
13 on to that process.

14 **MR. ROSENZWEIG:** Amd as Marshall laid it out,
15 though, the Roman Numeral I, ultimately we'll get
16 to a point where we may all decide, six of us may
17 agree that Roman Numeral I is something we want to
18 put forward in the report.

19 **MR. DUDLEY:** Yeah, it may be.

20 **MR. ROSENZWEIG:** But we might have a lot of
21 other options, but we might to say, hey, as a group
22 we still say narrow it and keep going.

23 **MR. DUDLEY:** Yeah. I know we have a
24 professional facilitator. I've used a lot of them
25 for clients and stuff. And one thing when

1 listening, and I'd welcome his input, but listening
2 to Davin, you know, Davin was kind of doing an
3 enviromental scan, so to speak, of the current
4 situation. And, I mean, I wrote down some notes,
5 and I can just begin to see that as you're doing
6 this enviromental scan of the way things lay out
7 today, there's a lot of consensus, I think. I
8 mean, there's consensus that the CST is broken.
9 From the local government perspective, the revenues
10 aren't stable. There's new technologies that
11 aren't in the base. And it's been going down. And
12 regardless what the REC projections are, there's a
13 lot of people concerned about that trend.

14 From the industry's perspective, we would
15 agree with all that and add to that that we think
16 from an administrative perspective and from an
17 audit and an administrative records perspective,
18 it's broken, too. It's just too cumbersome, too
19 expensive. There's already an existing model that
20 alleviates a lot of those costs and expenses.

21 I think we all see that this is going to be an
22 evolving tax. It's going to be because it is so
23 technology driven that we've now gone 12 years
24 without a substantial rewrite. And that's
25 probably, you know, many, many years too long in

1 between having a group like this meet every three
2 or four years to just kind of see what issues are
3 out there and what needs to be updated.

4 I spent some time going back through the AT&T
5 presentation, which I really want to say I
6 appreciated, because it showed me a lot of the
7 trends that I read about, and it helped visualize
8 that, quite frankly, a lot of the services that
9 these companies are offering, they're becoming
10 applications on the Internet. Everything's being
11 driven to IP delivered. And it's a video app or
12 it's a voice app or it's a text app. It's really
13 amazing. And I can only imagine what it's going to
14 look like in another two or three years as well.

15 And then finally, you know, we're throwing out
16 some details like the existence of a residential
17 exemption where, a lot of people, really, young and
18 old, are moving away from land line phones to
19 wireless phones. And that wireless phone really is
20 their life line phone or really is their
21 residential primary line. So why do we have a, why
22 do we still have this kind of relic of a land line
23 exemption when it's really not as relevant as it
24 was maybe 12 years ago when it was enacted. People
25 seem to be agreeing with that, that we need to

1 maybe undo that. In that while there's concerns
2 about maybe what's going on over the Internet and
3 whether or not they're taxable or non taxable, some
4 of that we can't do anything about because of the
5 Internet Tax Freedom Act in Washington is pending.
6 And also we may not be able to do anything about it
7 because of the Amazon-like issues that the
8 Department and the legislature are on a parallel
9 track wrestling with as well, which I think we all
10 need to monitor and be involved in because I think
11 there's a lot of correlation between that remote
12 sales use tax that may be currently a use tax that
13 may be owed on communications that's not being
14 paid either, as we learn from the AT&T
15 presentation -- or not learned, but I think the
16 AT&T presentation, to me anyway, helped just
17 illustrate -- you know, bring to life some of those
18 issues in a tangible way.

19 So from an enviromental stand perspective in
20 putting together this report to the legislature,
21 you know, I think those are five or six things that
22 there is -- maybe I'm wrong, but I hear a lot of
23 consensus on those things. Maybe not how to fix
24 them yet, but at least that they're out there and
25 we need to figure them out.

1 **MR. STACHNIK:** Marshall, can I just jump in
2 real quick? Again, I'm here to help and assist you
3 in this process of getting these options out. So
4 that we can get consensus.

5 But I'm hearing some functional things that as
6 a group that Mr. Suggs did well. And just, I'd
7 like to run those back real quick to you all
8 what -- as we go through each one of these options.

9 We discussed the genesis of the option: Where
10 did the option come from. And that was the first
11 thing that he started out by doing was talking
12 about where it came from. Following that, he gave
13 an explanation of the option to the group. He
14 talked about all the characteristics of that.
15 Within that is the situation where you currently
16 are now. He talked about where you currently are
17 right now, but also talked about all the potential
18 impacts this option could cause. Following that,
19 you all as a group discussed any clarifying
20 questions that you had for him as he brought that
21 option forward. Asked a few questions. And he
22 provided further clarification back of those
23 options. And then there was also some discussion
24 whether or not the language itself that was in
25 there was something that could stand the test of

1 time or make it into a report and all of that.

2 I think that's a good start of how you all
3 could discuss these options as they come forward,
4 and it may be helpful. Again, going back talking
5 about where the option came from, who it came from
6 perhaps, discussing an explanation of how you see
7 that option working, talking about the situation
8 that you're in right now, talking about the
9 potential impacts that the legislature, the
10 ultimate audience of this report would be, asking
11 any clarifications that you may have, providing
12 back that clarification, if you can, whether it's
13 from y'all or whether it's from the Department.
14 And taking all those things and adding all that to
15 your options, and that would be potentially the
16 discussion within that. And it also gives y'all a
17 basis of something that you can vote from.

18 So I think that was a good example that you
19 all might want to consider as we're going through
20 these options systematically, that that could be a
21 potential good framework to start the discussions.

22 **MR. STRANBURG:** Thanks, Jim. Why don't we
23 take our morning break right now and then come back
24 and keep talking about this. Let's be back at 15
25 minutes, be about 10:50. And please remember we've

1 got another meeting going across the way. Keep the
2 noise in the hall -- we'd appreciate that.

3 (Brief recess.)

4 **MR. STRANBURG:** For those of us that are up
5 here at the tables that are engaging in discussion,
6 we've had a couple of requests. Please be sure to
7 speak loudly. It's hard for the people
8 participating by WebEx and actually even some of
9 the other folks here in the room to hear everyone.
10 So please try to project a little louder. We've
11 got microphones on the table in front of you, but
12 please be assertive. Don't be afraid to speak so
13 that everyone can hear.

14 We've got about -- as I counted, we've got
15 about 40 options, over 40 options that members have
16 submitted that we need to start going through. And
17 I guess there's probably any number of different
18 ways we can look at them. We sort of got a little
19 bit of a framework for looking at them, and Davin's
20 discussion was very good, but I think what we
21 may -- we might want to consider doing is taking a
22 look at some of the options that have been
23 submitted and how they fit within the framework of
24 what you're talking about. Because, you know, how
25 do we get to: What things can we put forth to help

1 simplify administration and collection? What can
2 we do to provide for a broad and equitable base? I
3 think we have got some ideas that folks have
4 submitted here, so maybe if we start working
5 through some of the things that have been submitted
6 and see how they fit within the categories that
7 we've talked about. But I think there's some
8 feeling that we can plug them in there and have
9 some ideas that we can put forth that we can start
10 talking about, seeing what kind of consensus is --
11 is this a good way to simplify administration? Is
12 this a good way to broaden the base? Is this a
13 good way to ensure that there's revenue neutrality?
14 Is this a good way to achieve the stability the
15 local governments are looking for, and also the
16 stability, I think, that the industry's looking for
17 so that they have some certainty concerning the
18 taxability of the products that they have.

19 So, maybe we ought to start working through
20 some of these ideas, see how they fit within this
21 framework that we just spent a little bit of time
22 talking about, and get some discussion going on
23 those.

24 **MR. SUGGS:** Can I just ask one? Based on what
25 Kathleen said, she expressed on option -- we were

1 just talking sort of hypothetical -- some
2 immediacy. And then Charlie also expressed some
3 stuff. Just as we go through, maybe if everyone
4 takes little notes on what they think needs to be
5 done, it may take some time, we take mental notes,
6 that may help us at the end sort of deciphering
7 something can be done in the next three or four
8 months going -- particularly on the upcoming
9 session or is it something that may take, you know,
10 six, eight, nine, ten months.

11 **MR. STRANBURG:** Okay. Maybe a good place to
12 start is maybe we can start taking a look at
13 prepaid since that seems to be an issue that we've
14 talked a little bit about this morning, that
15 there's some immediacy, as Kathleen pointed out,
16 that they're coming up with that. What are some of
17 the things that we can do? If you go to page two
18 of what the Department put together for you, we've
19 got one of the sections there that talks about some
20 of the ideas related to prepaid. Maybe we can
21 start working through some of those and see how
22 they fit within our framework of is this going to
23 be something that will provide some stability? Is
24 this something that is going to simplify
25 administration, provide that at that broad and

1 equitable base, the kinds of things that are going
2 to give you some ongoing certainty?

3 So we'll just start off with first one which
4 was submitted by a couple of different members or
5 other groups to say, you know, is there some way to
6 amend the definition? What would be a good option
7 for that amended definition to bring it current
8 with what the model is now that the industry is
9 using with respect to prepaid plans? Because I
10 think there was some indication in some of the
11 presentations we had earlier on this topic that the
12 current statutory definition really was on a model
13 that was used at that time. But now that we're
14 almost 15 years out from that, creation of that
15 definition, things have changed a little bit. So I
16 don't know if Gary or Kathleen, if y'all want to
17 maybe talk a little bit about what you had put
18 forth as an option, or Kathleen, on behalf of the
19 industry, you can talk about that.

20 **MS. KITTRICK:** Sure. This kind of goes back
21 to some of the earlier presentations that were done
22 by the Department of Revenue when they were doing
23 this sort of state-by-state surveys of how prepaid
24 is taxed in all of the other states. And virtually
25 in all other states, it is taxed under the sales

1 tax. And we, you know, spend a lot of time talking
2 about why that is. It's taxed through the sales
3 tax because of sourcing issues and the inability of
4 retailers to know where that service is being --
5 that card is being used when it's being purchased
6 in a store. It makes perfect sense to keep it
7 under the sales tax, we believe. And I think that
8 from a consumer's perspective, you know, having it
9 go under the CST would be quite a big tax increase,
10 and I'm not sure that there would be a lot of
11 strong political will at the legislature to put
12 that kind of tax increase on consumers that use
13 prepaid services.

14 So I think from a wireless perspective, we
15 strongly believe that the definitions should be
16 modernized to maybe follow some of the other state
17 statutes or the streamline sales tax definition
18 that encompasses the product that is sold today.

19 **MR. LINDSEY:** I think that -- I agree. I
20 think that as we consider this as an option and
21 look at the attributes, the characteristics, I
22 think it really is important to understand that
23 really this is being looked at as found money
24 because of failure to update a definition when it
25 was adopted initially for the reasons that Kathleen

1 mentioned. There were very good policy reasons to
2 do that, very good practical reasons because of the
3 retail sales nature. And as we heard, in some of
4 the earlier -- the presentations about prepaid,
5 it's very complex and you can't just say, well,
6 let's go find out where they're making the calls.
7 We can't even -- that's even difficult to do with
8 post paid.

9 So, there's many good policy reasons, and I
10 think that, you know, it's been zeroed in because
11 there's been a fiscal note attached to it. But
12 again, it's primarily because of failure to update
13 the definition. So I think we do want to include
14 that in the report.

15 And again, the trend, Florida would be an
16 outlier if it were to adopt a higher tax. So it's
17 almost as if there was an error in a piece of
18 legislation that all of a sudden said, well, the
19 language said that, you know, erroneously that
20 something else could be taxed and everybody knew
21 that it really shouldn't have been taxed, but it
22 was an error. But you still apply fiscal note and
23 you just kind of hammer on it and say, well, that's
24 money that we're not getting that we ought to be
25 getting. Well, I think that money shouldn't have

1 been there in the first place. And certainly, if
2 it were, if the tax rate -- you know, if we did
3 adopt the CST to be applied to it, that would
4 certainly be a tax increase to the purchasers, I
5 think, the legislators, even though you could still
6 look at the statutes and say it ought to be in
7 there. So I think that's -- you know, as far as
8 reflecting in the report, the reason and the
9 attribute for considering adopting this streamline
10 sales tax definition or something akin to that, to
11 modernize the definition of prepaid, I think, you
12 know, that we should strongly -- you know, that
13 that should be reported in the details of how we
14 consider this as an option.

15 **MR. SUGGS:** Okay. I think you guys are right
16 to one point. The legislature is probably adverse
17 to the appearance of a tax increase. But I think
18 in the past couple of years, the legislature has
19 shown to -- the will to even out, equalize, or
20 redistribute tax burden. We look at a group as a
21 whole. I.e., if the application of -- whether it
22 be a CST or some new version thereof or some type
23 of flat surcharge or rate on prepaid in order to
24 broaden the base will provide enough funding or
25 resources to bring down other rates in other parts

1 of the equation.

2 Let's say, if I'm from the state's viewpoint
3 and I'm looking at the bottom line number of -- so
4 in terms of not necessarily increasing my revenue
5 but more we look at distributing the burden of the
6 tax generation. And it goes back to me when I show
7 my guys that here's a number of lines in Florida.
8 Here's a number of wireless lines. Here's a number
9 of a subset of wireless lines. Here's a number of
10 prepaid lines. And we have to look at those
11 segments and who's generating those tax revenues.
12 And I think if we're more looking at it as -- I
13 mean, if you guys wanted to buy down local rate,
14 you need money to do that in order to buy down
15 local rate and keep us revenue neutral. You need
16 resources to do that. And sort of we need to shift
17 the burden or move the burden around a little bit
18 in order to accomplish those things. So I think
19 that's how we were looking at it is that one way of
20 doing that, which even got my guys into the
21 discussion of simplification of administration.
22 Sort of got to do that, so that's even a
23 possibility to broaden the base. Which by
24 broadening the base may allow you -- I mean, we
25 have -- numbers, what does that do? Does that

1 generate -- allow you to bring down some rates in
2 some other parts of the equation. So I just want
3 you guys to keep that in mind.

4 A lot of that, what our guys are thinking and
5 possibly put it on the table or reaching consensus,
6 sort of deals with a lot of making sure -- that's
7 part of making improvements but sort of keeping us
8 revenue neutral. And so I know through the process
9 of trying to find win/wins. But that's sort of the
10 angle. Because I really still only think -- CST as
11 it is now, it would be very difficult to apply to
12 prepaid. It would be a nightmare for you guys, for
13 us, for everybody. Some type of simplification so
14 it could be applied, can maybe it broaden the base,
15 potentially buying the rate down or whatever,
16 however they want to apply it. I think that -- we
17 need to consider that.

18 Can I ask, Bob or Marshall --

19 **MR. STRANBURG:** Let me ask you one question
20 first, Davin, I heard you say it's complicated to
21 apply CST to prepaid. It's complicated under the
22 way the CST is currently structured. Now, if we
23 went to one of the other options that was put
24 forth, we were -- one of the members have put that
25 forth was if you went to a state-wide rate, a flat

1 rate, some defined rate so that you would not have
2 the varying rates, the situsing issue that you have
3 currently in CST, as I think reference was made
4 earlier, you know, there's a distribution
5 methodology for handling direct satellite now.

6 Could you apply a similar methodology to prepaid so
7 that you could capture prepaid under the CTS, you
8 could take it out of the sales tax, but it would
9 have to be at a different, what I call, rate
10 calculation rather than the current CST rate
11 calculation? Or another option that I'm hearing,
12 too, is you leave it in sales tax. You just apply
13 it to sales tax.

14 But again, I'm just wondering, do you agree
15 with me that it's really -- under the current way
16 the CST works, it's problematic. But if there was
17 a change in the way the CST calculation is done, it
18 could be something covered under CST?

19 **MR. SUGGS:** I think there's two ways, and I
20 think I said this in the beginning, and I agree
21 with you. To say the CST did not change, what we
22 were doing now? I think the best way you could
23 probably do it is to say if there's three legs to a
24 stool now, you would have to add a fourth leg and
25 say, we're going to do prepaid but it's going to be

1 a separate, you know how we have state rate -- we
2 have state rate on DBS and communications. Then
3 you have gross receipts on DBS and communications.
4 And then you have local. And then it would be a
5 fourth column, prepaid, with a separate formula or
6 calculation which could be a flat rate. But
7 it's -- and you could say, okay, local CST, state
8 CST, local CST there's situsing. But prepaid is
9 just going to be one flat rate and hang it out
10 there. And then we figure out how to divvy up
11 prepaid, what goes to the state, if any, if any
12 goes to the locals, if any, and keep it out there.
13 Remember I said we just add to the flowchart of
14 what the CST has accomplished now.

15 So, yes, it can be done now but differently
16 and just add it to the mix. Or I think an easier
17 way, and we're trying to simplify the whole tax, is
18 simplify sort of everything so it's applicable to
19 prepaid. So I think you could go two ways. I
20 agree.

21 **MS. KITTRICK:** Can I ask a question then? So
22 if we kept it just for argument sake, under CST and
23 it was a single state-wide CST rate, would
24 retailers then be required to file as CST vendors?
25 And would they then have to -- I mean, we'd have to

1 do new resale agreements, right? Well, no. So --
2 but they'd have to file separately --

3 **MR. STRANBURG:** I would think, Kathleen, what
4 you're saying is, yes, if somebody's selling a
5 prepaid product, they would have to be a registered
6 communications services tax dealer.

7 **MS. KITTRICK:** Right. And they would have to
8 be --

9 **MR. STRANBURG:** And they would have to be
10 collecting that at the CST rate, whatever that
11 state-wide rate would be. And many of them
12 probably would also be sales tax dealers, so they
13 would also have to be sales tax dealers.

14 **MS. KITTRICK:** Right. Set up a completely new
15 administrative structure for most retailers.

16 **MR. STRANBURG:** Structure for many -- possibly
17 would -- yes, that is a potential impact that would
18 happen.

19 **MS. KITTRICK:** Right. It brings you back to
20 making it a whole lot easier under the sales tax
21 for retailers. I mean, there's -- I'm not here to
22 argue for the retailers, but, I mean, there are,
23 you know, 4,000 according to the Florida Retail
24 Association. And I think that would just be a
25 tremendous burden for them to have to go down that

1 road of separate audits, separate filings, separate
2 registrations.

3 **MR. LINDSEY:** As we -- go ahead.

4 **MS. FOX:** One of the overarching concerns for
5 local government is revenue and a stable source.
6 Taking something that is supposed to be producing a
7 revenue now is not found money, that's putting
8 money back where it was supposed to be. And it's
9 shortening the base, not broadening the base. We
10 cannot have a stable revenue stream if we keep
11 exempting things.

12 Additionally, additionally, if you have the
13 same product but it's being delivered in two
14 different manners and one is taxed and one is not,
15 then that prevents -- presents a very basic
16 unfairness issue, and it's going to drive the
17 market to where there is no tax. So, I don't see
18 how that benefits local governments at all. So,
19 you diminish the base and you've created a basic
20 unfairness instead of correcting the unfairness
21 that currently exists.

22 **MR. DUDLEY:** I think prepaid's the poster
23 child for the fact that we haven't looked at this
24 tax in 12 years. Because what's happened is a
25 product or a service has emerged. And with all due

1 respect, putting aside the Department's legal
2 position because I know there's different opinions,
3 but yours is the one for REC purposes that counts.
4 There is some dispute over where it fits here. And
5 I think that it just -- it's the example of why you
6 have to look at this tax every couple of years.

7 Now, putting that aside, because we haven't
8 done it. So what do you do about it now? And to
9 Sharon's point, you're trying to be competitively
10 neutral and to have the broadest base you can for
11 having a fair and efficient and a market-driven
12 consumer-friendly tax.

13 Where I struggle is how to get the genie back
14 in the bottle in this with a tax that's currently
15 being administered, maybe legally administered, but
16 administered at 6 or 7 percent and then have to
17 deal with tax that's got the variable rates that we
18 have to deal with and is at a rate of anywhere from
19 12 to 16 or 17 depending on the jurisdiction. And
20 we have testimony from the retailers that they
21 don't want to be communication service providers or
22 dealers.

23 And so I've really struggled with this and
24 what I was trying to recommend. The only thing
25 that I came up with is an option that's not going

1 to be popular is that it took several years for the
2 three-legged stool of the 911 county people and the
3 retailers in the industry to come up with a way of
4 handling it on the 911 50 cent side. I don't know
5 that that's -- I think that's being worked on now.
6 I'm not really a part of those discussions, but I
7 think that's going to be a legislative proposal
8 this session. In the meantime, they had to call a
9 time out.

10 Now, the problem is when you call a time out
11 from the local government perspective, you're a big
12 loser because you're not getting what you think you
13 should be getting on that particular product or
14 service. And if you only provide post paid, you
15 may be at arguably a competitive disadvantage
16 because you've got a competitor delivering a
17 product, a similar product, but in a different
18 fashion which is Sharon's point.

19 So, I just want -- I don't really have a
20 solution. I wish I did because I think that even
21 if you had consensus that said, tomorrow, we really
22 are going to put aside the administrative
23 collection ability of retailers and 3,000 of them
24 or however many there are and we're going to
25 recommend that the legislature put prepaid in the

1 full CST as it exists today, I think we all know
2 that that would just gather dust because they're
3 not going to take a service that's at 6 or
4 7 percent and subject it to the 50 or 60 percent
5 tax. I think the only way you get to this type of
6 issue, which I'm guessing prepaid is just an
7 example of issues we're going to be facing every
8 year as this market evolves, this technology
9 evolves, I think you get there by moving to a
10 uniform tax if you can work out all the
11 distribution details and then working to get the
12 state and others to help buy down these rates a
13 little bit so that you can get to an overall rate
14 that funds the three legs of the stool but is much
15 closer to the current sales tax because these are
16 turning into commodities and services. These are
17 arguably utility-like services that have just --
18 they've changed. It not water, sewer, or
19 electricity anymore. And I know these comments
20 aren't that helpful. I just think that it's -- I'm
21 just trying to sketch how I see it.

22 **MS. KITTRICK:** Charlie, I think they're very
23 helpful. I mean, I think the reality is, and I
24 know it's a scary reality for local governments and
25 I understand that, but we cannot guarantee the

1 revenues of yesterday, tomorrow. We just can't
2 guarantee that. It's changing. I mean, the whole
3 structure is changing. And there is going to be a
4 day when you have -- and we've talked this -- when
5 you have Google Voice and you have Skype and you
6 have all of these applications that are riding over
7 the Internet, and voice is free. We're not going
8 to be charging money for voice going forward. And
9 then you're going to be left with an IP service
10 that is not taxable, you know, according to the
11 Internet Tax Freedom Act. We can't guarantee the
12 money yesterday, tomorrow. I mean, it's -- I think
13 we'd be doing ourselves a disservice if we're going
14 to sit here and promise that that's going to be the
15 case forever. I mean, I know it's scary and it's
16 frightening and I think there are bigger issues
17 when it comes to the bonding and how you solve that
18 problem. I don't know that it can all be solved by
19 the CST.

20 **MS. FOX:** But to continue, the -- it was said
21 that that would make Florida an outlier. The CST
22 itself made Florida an outlier except back then
23 they called it a pioneer. There's -- the devil's
24 in the details, and he's spinning it.

25 But we have currently a state-wide rate for

1 satellite. I'm not suggesting a different rate
2 because we've already heard the retailers indicate
3 that that's not doable for them. But they did seem
4 to indicate that a surcharge was doable and a
5 tiered surcharge based on how much is being paid
6 would prevent somebody who is paying \$20 for a
7 Lifeline service from paying as much as someone
8 that has got a Smart phone and is supporting all of
9 that bells and whistles that a 120 or \$150 prepaid
10 does. So, that seems to me to be some type of a
11 logical comprise so that that surcharge is geared
12 towards the local government aspect of the tax, and
13 it doesn't require the retailers to report on a
14 communication service tax provider basis. It's
15 just a surcharge based on how much money is spent
16 on the service. So --

17 **MR. DUDLEY:** I think that's an option. I
18 think another option would be that the legislature
19 should -- if it is not going to put prepaid in the
20 CST given various policy, collection, and political
21 issues, that, you know, as the legislature's done
22 with the rural counties by changing the
23 distribution mechanism of the 4 percent of the DBS,
24 they ought to consider allocating some of the GR
25 dollars from prepaid sales tax towards some local

1 distribution and/or PICO process because I guess
2 you could make the argument that it's somewhat
3 eroding revenues that would otherwise go to the --
4 the state's getting their piece, but the gross
5 receipts piece is missing. And the local piece is
6 missing. That's another option. I'd say it's the
7 right one long term. I'm not sure I have a -- for
8 prepaid as said, I'm not sure I have a permanent
9 long-term answer or solution.

10 **MS. FOX:** Well, if you take it totally out of
11 the taxable base from the CST perspective because
12 it is CST services, you dramatically and
13 permanently eroded the base. And you're driving
14 the market to where it all goes to prepaid now
15 because everybody can save money because they don't
16 have to pay the tax if they do prepaid.

17 **MR. DUDLEY:** Or it's done on a moratorium
18 basis, like was done on the 911 fee where people
19 just decided they need more time from a stakeholder
20 perspective. I'm just trying to figure out how you
21 ameliorate the damage that's maybe being done to
22 some of your revenues --

23 **MR. SUGGS:** The key -- I want you to
24 understand what Sharon is saying is like we talked
25 about the REC earlier. Right, this is simple for

1 folks that are into REC. When there's a political
2 aspect sooner or later, a committee chairperson or
3 somebody is going to ask the staff director, if not
4 ask somebody at REC if there's a local piece
5 between cities and counties is 700 -- say
6 everything was easier if there was no local CST,
7 right? Say if there was no local CST, you could
8 just do one statement. Guess what? To satisfy us,
9 700 million. That's a price tag. That's -- the
10 pot's got to grow to buy us out. And then you can
11 do whatever you want with the rate or whatnot. So
12 this is the piece from -- broadening the base, even
13 if it's to say this 50 cents, the CST is on prepaid
14 is 50 cents, period. Or whether it's tiered like
15 Sharon said and Mayor Resnick had in here, that
16 generated 350, 400 -- you're half of the way there.
17 But that's not only how we think in terms of
18 replacing our revenue source. Because at that
19 point, then we can separate this thing -- you put
20 money in the pot, we figure out how that money
21 comes in so it's stable and reliable. It keeps our
22 revenue whole, and we're out of the picture. But
23 the state has to have the resources to -- whoever's
24 making the decision has to have resources to keep
25 us going. But at the end, all of you win.

1 Not only -- okay, you bring prepaid into the
2 mix, Kathleen, well, guess what? Charlie wins,
3 Brian may win because you may be able to bring down
4 whatever the rate needs to be. The whole Telecom
5 industry wins depending on the rate, whatever you
6 can do with those rates because at the end of the
7 day, there's going to be tax -- but everybody's
8 thinking about a bottom line number. And not only
9 can we afford not to go backwards, they can't go
10 backwards either. We all heard the people. Capped
11 and maxed. They can't go backwards either, so I
12 think there's a way that -- this might not be three
13 or four months, like Charlie said. This make take
14 two or three years because you know what? As soon
15 as we come into a solution, something else is going
16 to be doggone different.

17 **MR. DUDLEY:** I got to where you're at because
18 I read through the -- I can't remember which one it
19 was, which notebook, but I think it was part of the
20 Department's survey. And there actually was one
21 state that subjected prepaid to what is comparable
22 to a tax like a communication services tax.

23 **MS. KITTRICK:** No, it was New Hampshire, and
24 they don't have sales tax.

25 **MR. DUDLEY:** I'm sorry, but it was 7 percent

1 or something. I don't remember which one it was.
2 But when I looked at that, I said, yeah, if our CST
3 total rate, instead of 13.17, just using that as an
4 example, was 7, we wouldn't be having this
5 discussion, right? I mean, that's a bigger picture
6 issue on how to get there. But you wouldn't have
7 people trying to do everything they can to avoid
8 paying CST like to argue that their application is
9 exempt or filing stuff with the Department or
10 hiding or whatever people may do because it's
11 taxpayer behavior, I guess. I just don't know how
12 you get to your point, Davin. I'm with you. I
13 just don't know how you get there.

14 **MR. STRANBURG:** Gary, you had a comment?

15 **MR. LINDSEY:** Well, a couple of comments. I
16 believe when the prepaid product was -- when
17 legislation was enacted to subject the prepaid
18 product to sales tax, I believe there -- you know,
19 there were still -- there were higher prevailing
20 rates on Telecom even back then. So I think the
21 intent truly was to subject it to the sales tax.
22 And again, I do think that the -- it's really just
23 the fact that the definition never got updated. I
24 think that's just a fact.

25 And as I'm looking through this, I'm thinking

1 as we're talking through this a little bit of
2 getting outside thinking about the content, these
3 discussions that we're having, I think these -- and
4 we're kind of going from one option to another
5 among prepaid that we're discussing. But I think
6 this will lend itself to us ultimately being able
7 to have the -- I call them attributes. I don't
8 want to say for or against, but attributes that go
9 along with each of these -- each one of these
10 options, and we're overhearing that. Keeping
11 the -- you know, adopting a sales, streamline sales
12 tax definition, that's revenue that is not going to
13 be there if that continues. So that would be one,
14 you know, attribute of this option.

15 So I'm just -- you know, I'm not arguing for
16 or against it at this point. I'm just trying to
17 say, are we -- you know, process wise, it sounds
18 like we are discussing the attributes that we'll
19 ultimately put in the report about these various
20 options. That sounds kind of reasonable.

21 Another point I'd like to make is, and really
22 Charlie kind of discussed that or touched upon it,
23 is really that the prepaid product really is kind
24 of a poster child because of the discrepancy
25 between the sales tax that applies to other goods

1 and, I guess, some services in Florida and what
2 applies to telecommunications. You know, and I
3 guess it's hard not to talk about other options as
4 we're talking about any particular one. But, you
5 know, I guess there's -- you know, if you step back
6 and talk about broadening the base, what about
7 broadening the base to other services outside of
8 Telecom? Why to Telecom consumers -- and again,
9 we're talking about consumers that are paying this,
10 why are they paying a higher rate on that than they
11 are on other goods and services? We know the
12 legacy of it, but still I think that question needs
13 to be looked at as we're considering the various
14 options.

15 So the prepaid kind of crosses over into both
16 arenas, you know. It's why -- the question could
17 be asked, why is it not part of the CST? But then
18 we can also look at it and say, well, it's treated
19 like any other goods and services in Florida, which
20 is a good thing. And why are not other Telecom
21 services and communication services being treated
22 that way? Well, I know the answer. It's the
23 revenue gap. But still I think we need to consider
24 that and consider, I think, Davin mentioned that,
25 you know, and others, is there a replacement? As

1 we see this diminishing, what is a replacement for
2 the CST and focusing solely on communications
3 services?

4 **MR. SUGGS:** Can I answer it as a question,
5 Marshall?

6 **MR. STRANBURG:** Sure, Davin.

7 **MR. SUGGS:** Can I ask that of Bob? It's not
8 on the spot -- I just like it when you're at the
9 mic.

10 In terms -- I know we meet again on the
11 31st, correct? How difficult would it be to
12 model some type of -- to show us some numbers like
13 that segment of basic prepaid, some revenue
14 generation ideas? Let's say picture your model
15 like 50 cents or a dollar or some type of thing on
16 the prepaid market -- like a dollar surcharge of 50
17 cents to show how much revenue that would generate?

18 Or -- I think you know -- is there some type
19 of model? This piece, this missing piece that
20 we're talking about, Marshall, broadening the base,
21 how much would it -- we're speaking hypothetically
22 trying to figure out how much it would broaden the
23 base in terms of --

24 **MR. MCKEE:** We did previously do for the work
25 group an estimate of sort of magnitude size of the

1 prepaid issue in Florida without any regard for how
2 they're going to be treated today. We did a
3 magnitude, and we made certain assumptions about
4 average levels of service and number of lines, and
5 we could do something similar. Now, if as Ms. Fox
6 talked about, if it was a desire for a tiered sort
7 of plan, we would have to make additional
8 assumptions of how, within those number of lines
9 that we got from, I believe it's PSC data and FCC
10 data compared to what we get in collection
11 information. You know, we could do that. But it
12 would require additional assumptions beyond what
13 we -- as far as essentially where would those tier
14 breaks be. What the surcharge would be, we'd have
15 to have some direction for amount of surcharge, if
16 it were a tiered surcharge, at what level of
17 service would we tier up. So we'd have to have
18 sort of that set of parameters in order to be able
19 to do an impact.

20 **MR. SUGGS:** Is that something doable by the
21 31st or no? Does that -- I mean --

22 **MR. McKEE:** It just depends on your
23 willingness to give us the parameters.

24 **MR. DUDLEY:** Can I understand what you're
25 talking about? Are you saying on the tiered

1 approach, like just to use examples, if the product
2 was 19.95, it would be a dollar. And if it was
3 29.95, it would be 1.50; is that what you're
4 getting at? There would be a surcharge that was
5 fixed, it wasn't dependent on the price. I'm just
6 trying to understand.

7 **MR. McKEE:** My understanding of how the tier
8 that had been talked about was sort of a range of
9 price for which a surcharge would then apply. So
10 anything --

11 **MR. DUDLEY:** Like the bracket system?

12 **MR. McKEE:** Like up to 19.99 -- yeah, like a
13 bracket system. I think up to 19.99 would be X.
14 Anything from 20 to 29.99, in your example, would
15 be Y. And then so it's a just of sort of a tiered
16 structure. And then in order to estimate that,
17 we'd have to make some assumptions about how the
18 service is going to be distributed. Just depending
19 upon, you know, the more assumptions you make, the
20 more -- the broader the ranges get, sort of, in the
21 confidence of the impact. I think we assumed 30,
22 40, and \$50 worth of service I believe when we did
23 the ranges for the previous estimate. But that was
24 sort of an average service across all the tax, all
25 the lines and service in prepaid. So it wouldn't

1 say that 20 percent worth of \$30, X percent worth
2 of 40, X percent worth of 50.

3 **MR. SUGGS:** The only reasons I'm asking for
4 numbers is because if he came back and said, here's
5 a model. It's only \$100 million. It might not be
6 worth it to jump through the hoops. But once we
7 know what's really in front of us, it might help
8 the discussion.

9 **MS. KITTRICK:** Here's some numbers that I --
10 taking what Gary had to say and Charlie had to say
11 and you had to say about the buying down of
12 \$700 million. What would the impact on the sales
13 tax be if we tried to buy down the local government
14 CST and the GRT? If we broadened the base -- you
15 know, replacement revenue, broadened the base,
16 looked at the sales tax, what would the overall
17 sales tax -- not just on communications services,
18 because again, I think from our company's
19 perspective we would like to get out of the
20 discriminatory nature of the communications
21 services tax completely, but look at making the
22 local governments whole, dealing with the PICO
23 issue, what would the overall sales tax need to be
24 to cover the local government's expenses?

25 **MR. MCKEE:** Is that a question for right now

1 or for next meeting?

2 **MS. KITTRICK:** Maybe for next time. I mean,
3 if we're going to run numbers, I'd like to see that
4 number.

5 **MR. ROSENZWEIG:** Are you asking to increase
6 the sales tax rate? To the state sales tax rate,
7 replace CST?

8 **MS. KITTRICK:** To replace the local revenues
9 of the CST.

10 **MR. SUGGS:** What --

11 **MR. MCKEE:** My recollection is a penny of
12 sales tax right now generates somewhere around 3
13 and a half to 3.7 billion --

14 **MS. KITTRICK:** You mean if we can -- a quarter
15 percent, and that money is dedicated back to the
16 local governments for the CST? You know, you get
17 an expanded base, you get your revenue stability,
18 we get out of this discriminatory tax treatment, we
19 get out of arguing what's in the sales tax base and
20 what's in the CST base. And you're not keeping a
21 huge tax increase on just communications industry
22 again. I mean, if you want to look at the overall
23 stability for revenue for local governments, I
24 think you need an expanded broad base that isn't
25 relying on trying -- us trying to keep up with

1 technology year after year after year.

2 **MR. STRANBURG:** Sure.

3 **MS. FOX:** Just a couple points that I'd like
4 to make that Charlie made initially.

5 One of them is when you're talking about sales
6 tax distributions, the legislature has demonstrated
7 multiple times, they do have a track record of
8 tweaking the distributions. That every time they
9 tweak the distribution, the cities lose, every
10 time. And because they've already demonstrated a
11 willingness to tweak it for anyone's behalf, then
12 the cities lose and the taxpayers in the local
13 communities are donating money to rural counties
14 and to -- not that that's not a good --

15 **MR. SUGGS:** Urban counties --

16 **MS. FOX:** -- source. But it still is coming
17 out of the city taxpayers' wallets. So I think
18 that that needs to be mentioned. It's a very big
19 concern of mine.

20 The other thing, when we're talking about
21 discriminatory situations here, I think that it's
22 very important to understand that the public land,
23 the rights-of-way, is being used by private
24 companies for shareholder gain. And so there
25 should be something that is thrown into the

1 community pot to pay for that use of the public
2 lands. Otherwise, you'd be negotiating with every
3 parcel holder along the route where your facilities
4 are. And the cities are the ones that have to
5 maintain those rights-of-way. The cities have a
6 concentrated use of the rights-of-way by the -- all
7 of the utilities and especially the communication
8 companies. And there is -- probably one of the
9 most popular things when there is the pothole
10 that's created in the street because a
11 communications company did not put the
12 rights-of-way back to the way they found it, the
13 citizens call the mayor and say, fix that. So it
14 has a very direct and personal impact on local
15 governments. So it's not discriminatory in that
16 there is no impact that you have on the local
17 governments. You have a large impact on the local
18 governments because you are a major user of the
19 rights-of-way, and I think that needs to be put in
20 there, too.

21 The franchise fees that were contributed to
22 the CST tax are a revenue source that have been in
23 place since the 1940s. And while it might not be
24 as equitable as it once was or as easy to
25 administer as it once was, the tax structure and

1 the fee structure of Florida is what it is. And
2 that's one of the few streams -- the CST now
3 replaced franchise fees and utility taxes for
4 communication. And that's one of our major revenue
5 sources. So, I don't think that can be overlooked.

6 **MR. DUDLEY:** Right.

7 **MS. FOX:** The stability of it and the fact
8 that when it's locally assessed, the legislature
9 doesn't have quite the propensity to tweak it.

10 So I just --

11 **MR. DUDLEY:** No, and I -- I think along those
12 same lines, at that time when we did CST, you know,
13 probably 70 to 75 percent of the revenues generated
14 in the communications industry were generated by
15 companies in the revenue, and now that's flipped.

16 **MS. KITTRICK:** Right.

17 **MR. DUDLEY:** 75 percent of the revenues that
18 are being generated are generated by companies
19 providing services that don't touch the
20 right-of-way because there's been exchange to all
21 these devices. And so, you know, that was one of
22 the trade offs, I think, that actually has been a
23 benefit to local governments, and that is that you
24 were able to stabilize and enlarge the base by
25 getting wireless companies to begin contributing

1 some of that dollars. There were other taxes and
2 fees that they paid, I get it. But that's been one
3 of the major changes.

4 You know, the whole world's changed in regards
5 to the franchising. Just Gary's law practice and
6 my law practice changed dramatically in the last
7 decade or more as states across the country have
8 moved away from the local regulation and permitting
9 and collection of franchise fees and stuff and
10 moved to different models of regulations. That's
11 totally changed because of the evolution of the
12 marketplace.

13 But I understand, Sharon. That's why we
14 have -- some localities require permit fees.
15 That's why all of them have bonds that we pay to
16 make sure that if we cause damage in the
17 right-of-way that there's a way of getting that
18 recovered, that damage recovered beyond your local
19 CST dollars.

20 **MS. FOX:** Is backhaul not done through wire
21 transmission?

22 **MR. DUDLEY:** I'm sorry?

23 **MR. RESNICK:** For wireless services.

24 **MS. FOX:** Backhaul service for wireless,
25 doesn't that go --

1 **MR. DUDLEY:** A lot of that is over private
2 property because we're backhauling for towers that
3 aren't on your right-of-way, they're on people's
4 private property.

5 **MR. RESNICK:** Sharon's point is good. I mean,
6 it's -- it's not just the revenue to -- for our
7 bonding capabilities and ensuring that there's a
8 revenue neutral source -- a revenue source that is
9 not going to be harmed for local governments. The
10 CST was designed to replace revenue to maintain the
11 rights-of-way as well. And if we just go to a
12 sales tax, it won't. And so we are going to have
13 to get back rights-of-way fees to maintain the
14 rights-of way. A distribution of sales tax will
15 not give us money to do that plus it takes away
16 permit fees.

17 For example now, I know one community in South
18 Florida that has an application for Metro PCS -- I
19 guess Tmobile because Tmobile is buying Metro
20 PCS -- to install a tower in a right-of-way with
21 backhaul fiber. And all in the rights-of-way, not
22 on private property. I don't know if the local
23 government now can charge that company a fee for
24 being in its rights-of-way -- probably not, because
25 they pay the CST.

1 **MS. KITTRICK:** I would imagine they would pay
2 a lease agreement to the local government.

3 **MR. RESNICK:** No, there's no agreement.
4 You're not allowed to do an agreement. You can't
5 do a franchise agreement to use the rights-of-way.

6 **MS. KITTRICK:** Not a franchise agreement, but
7 a lease agreement for the -- of the property.

8 **MR. RESNICK:** You can't lease rights-of-way.
9 So they can't do any type of agreement with DME.
10 They're not paying CST because -- well, under your
11 model they would only pay sales tax. And we can't
12 even charge them permit fees. The review, to
13 review what they want to install in the
14 rights-of-way is estimated to cost \$18,000, and we
15 can't even charge a permit fee. So we're actually
16 now --

17 **MR. DUDLEY:** You have the authority to charge
18 permit fees.

19 **MR. RESNICK:** Well, it depends. I mean --

20 **MR. DUDLEY:** Some have said --

21 **MR. RESNICK:** I'm glad you said that. Let's
22 get that on the record because that's my position
23 as well.

24 **MR. DUDLEY:** There's an option in the statute
25 that can be changed every six months under the CST.

1 You either charge permit fees, which have
2 restrictions or you take a higher local CST and
3 don't charge permit fees.

4 **MR. RESNICK:** Well, the restriction under the
5 permit fee is \$100.

6 **MR. DUDLEY:** Right.

7 **MR. RESNICK:** That's not going to cover an
8 \$18,000 review by engineers of what they want to
9 install in the rights-of-way and towers which is
10 totally different -- you know, we're thinking about
11 trying to come up with a structure that does have
12 to be technology neutral and also plan for the
13 future. A sales tax is not going to be it.

14 **MR. LINDSEY:** A couple things. And I think --
15 I thought Kathleen was actually mentioning another
16 option to consider that if the overall sales tax
17 rate across Florida could be normalized to take
18 care of the revenues that are generated by the CST,
19 and that that could be an option so that you -- so
20 it would be. I think it would be under that
21 option. So maybe that's another option that we
22 need to add to the list because I don't see that
23 particular option. I guess it's a variation on
24 broadening the sales tax base and repealing CST.
25 It would be repealing CST and spreading that --

1 spreading that over the existing sales tax so that
2 that revenue would be directed back to the
3 localities. I think that's another option.

4 **MS. KITTRICK:** I think we really --

5 **MR. SUGGS:** And that's covering the state as
6 well.

7 **MR. LINDSEY:** I'm sorry.

8 **MR. SUGGS:** So the way I'm reading it, just
9 say all the CST together -- state, all the
10 different parts let's say was 2 billion. Let's
11 just say it was 2 billion, hypothetically we're
12 between three and 4 billion, on the penny you're
13 looking at about half a cent. Half a cent would
14 wipe out CST for everyone.

15 **MS. KITTRICK:** Right. And then -- I mean, you
16 had indicated and this is sort what gave me the
17 hope to even mention it, Davin, that your folks had
18 said that really -- I mean, the money is the key
19 driver for the counties, right? It's the most
20 important thing, more so than --

21 **MR. SUGGS:** And it's also --

22 **MS. KITTRICK:** It's important, and it sort of
23 future-proofs the technology, I think.

24 **MR. SUGGS:** If you look at our number, and
25 this is not -- I'm not speaking for the cities or

1 the counties but on the -- what we're saying is not
2 any different -- I understand what Sharon and the
3 Mayor are saying is that revenue -- to reverse
4 current revenue and then when you get to this
5 capacity issue, and I know they're talking about
6 more than capacity. They're talking about current
7 day-to-day public services. But all that needs to
8 be considered. It is my understanding that you
9 guys were in -- I wasn't here in 2000, 2001. But
10 when he took the seven and squished it to one,
11 there had to be those concessions and
12 considerations made to local government that
13 this -- these things are going away. So what we're
14 getting in return, local governments are sort of
15 being compensated for not being able to get
16 directed franchise fees. A lot of those -- I guess
17 a lot of them, what it morphed into was CST. A lot
18 of things were considered and local governments
19 were compensated.

20 So, yes, from my viewpoint, from the county's
21 viewpoint, if it was a number but that number has
22 to entail what -- there was two things I put out
23 there, it was what we're getting currently and
24 capacity. And I think even where the city's --
25 further extension. The way I read them is there's

1 money, there's capacity, but there's also some
2 actual revision of public services.

3 **MR. RESNICK:** For services, exactly.

4 **MR. SUGGS:** To your industry.

5 **MR. DUDLEY:** Right. And there was two
6 parallel efforts, just to be clear on where we've
7 come from. At that is there was a CST work group,
8 and there was also a right-of-way work group. And
9 the right-of-way work group was working in
10 parallel. There was people that worked in both
11 work groups. And the right-of-way work group went
12 in and created all the new sections in Chapter
13 337.401 through 404 that dealt with communications
14 providers, because we changed all the terminology,
15 and their relationship with local governments in
16 using the public right-of-ways. There was this
17 permit fee on or off, and that kind of tied it back
18 into the CST. And there was a -- also had been
19 tied into some of the stuff going on in Washington
20 at the time when the Communications Act was being
21 rewritten. The Communications Act said local
22 governments shall treat all providers the same, not
23 discriminatory. And so we were working off that
24 parameter, and we redid simultaneously the CST over
25 a two-year period. And a parallel piece of

1 legislation that dealt with the rights-of-way and
2 dealt with this -- again, this permit fee election.
3 And then we did some carve outs for cable
4 franchising, which were undone by the legislature
5 in '07 -- I think, '07 or '08 where the legislature
6 moved that process to the Department of State, and
7 it undid all the local franchising and
8 relationships.

9 So there was a -- there was a parallel process
10 that was going on for those -- that period of time.

11 **MR. SUGGS:** Maybe the answer is right now.

12 Kathleen, in terms of what -- yeah, you should have
13 or if I have folks that would be great. If I get
14 folks in the Senate and House and say, hey, here's
15 350 million, just don't worry about it. But as a
16 subject to -- and maybe based on just what Charlie
17 said, I mean, the money issue, stable revenue, but
18 maybe what -- a legitimate concern that if one of
19 your companies or member of the industry needs a
20 service or service provision from a local
21 government, there needs to be a way to recoup
22 costs. I mean, going forward or -- you know, the
23 way the Mayor described it, putting something in
24 the right-of-way or requiring to rent service from
25 the local government for the benefit of your

1 stakeholders for your company. I mean, is this a
2 cost of doing -- for you it could be a cost of
3 doing business. But, I mean, there needs to be a
4 way -- like any other citizen requiring, receiving
5 service, whatever -- so, I mean, maybe you put that
6 as -- am I explaining it correctly?

7 **MR. RESNICK:** I think a little bit narrowly
8 because it's not just service to one particular
9 company that's going to need services from local
10 government. It's -- obviously the rights-of-way is
11 kind of, as Sharon explained, it's a sacred trust.
12 It's a public trust. It's not used by just the
13 communications industry or the electric utility
14 industry or gas or whatever, it's used by the
15 public. And if we don't maintain it, you're right.
16 I get the calls.

17 You know, when AT&T was doing some repair in
18 my city on Dixie Highway, which is a main
19 thoroughfare, and damaged the right-of-way, it took
20 three weeks to repair and Dixie Highway was closed
21 for three weeks. I'm getting those calls. I don't
22 know if you got those calls or not, but -- and it's
23 our obligation to make sure that that work is done.
24 You know, we were able to do it and it took three
25 weeks to take care of it. But there needs to be a

1 revenue source to cover the maintenance of the
2 rights-of-way. And the one alternative that has
3 been put on the table so far about broadening the
4 base of the sales tax and getting rid of
5 communication services tax, which was supposed to
6 replace the rights-of-way fees that these companies
7 paid for the privilege of using the rights-of-way
8 won't do it. You know, it's a privilege to use the
9 rights-of-way. They have to pay a fee for doing
10 it, and this model doesn't talk about that at all.

11 **MR. ROSENZWEIG:** I'm having a hard time -- I
12 mean, I appreciate it. I think it's a great
13 concept. I'm having a hard time visualizing the
14 legislature ever, ever even raising the sales tax
15 rates state-wide. I'm have a real big hurtle
16 visualizing the state tax going from 6 percent to
17 6-plus something. I just don't -- just watching
18 them from afar and you guys are a lot closer, I
19 just don't see them really seriously considering
20 that, telling everybody that we're going to raise
21 the state-wide sales tax. I just don't think
22 that's realistic.

23 **MS. KITTRICK:** Here's the way I look at it.
24 If you're paying 16 percent on your cable bill and
25 you're paying 16 percent on your wireless bill and

1 you're paying 16 percent on your land line bill,
2 you know, you can very easily sell it as a tax
3 decrease for your consumers because you're just
4 going to the sales tax.

5 **MR. RESNICK:** You guys, every deal with the
6 legislature and -- in this climate, I'm not seeing
7 whatever the story is.

8 **MS. KITTRICK:** From a consumer standpoint, I
9 think that they would much rather half a percent
10 than having to see all this junk on their bill. I
11 don't know.

12 **MR. RESNICK:** Just a point on that. Again,
13 for one, part of our mission does not include
14 looking at lowering tax rates for consumers. And
15 as this process evolved through the legislature, I
16 don't know if the consumer groups were active,
17 saying we want the tax rate reduced. But I'm not
18 hearing from my constituents that they're paying
19 too much in taxes for these services. That's not a
20 complaint I get. I get complaints about the
21 service all the time. I get complaints that, you
22 know, about responsiveness and -- or I get
23 complaints about, you know, they're disrupting my
24 ability to access the streets and get out of my
25 neighborhood where they are doing some

1 construction, you know, that's damaging my
2 property. I get those complaints. But I have
3 never received a complaint from a consumer saying
4 the tax rate of these services is too high.

5 **MS. KITTRICK:** I think our charge was to sort
6 of look at modernizing this communication services
7 tax and future-cooping the revenues, right? I
8 mean, I don't think our charge was to maintain the
9 status quo and have your CST revenues fall through
10 the floor because of the changes of technology. I
11 was trying to come up with an idea that gives
12 you -- that meets the tax of trying to keep things
13 at least stable and predicable and dealing with the
14 changes in the technology going forward. I mean,
15 we can't promise that we're not going to stop
16 monetizing voice when there's Google Voice and all
17 these other applications that are running over the
18 Internet.

19 **MR. RESNICK:** Actually, that's what I was
20 thinking about is one possible option or something
21 to look at. I was actually on a panel in New
22 Orleans when someone from Google explained what
23 they're doing in Kansas City, and they are paying
24 franchise fees and they do pay communications
25 services tax on their communications services.

1 They're not paying it on the Internet service, but
2 they are paying a franchise fee because they're
3 using their rights-of-way. And the governments are
4 incurring those costs. Plus there's other public
5 service obligations that they've agreed to, just
6 pursuant to their agreements with the local
7 communities.

8 Maybe we should look at what Google is doing
9 because, you know, when you're looking at the
10 future-proving technology, they are far ahead of
11 anything that anybody else in the state is doing.

12 **MR. DUDLEY:** To that point, Gary, I think
13 that's what we've talked about. And that was part
14 of the AT&T presentation is that you have these
15 services delivering IP. In that case, it's an IP
16 voice service that's traveling over a physical
17 network that Google happens to have in the ground
18 in Kansas City. So I'd be interested to hear --
19 and I'm not discouraging Google -- I'd be
20 interested to hear Google's response about Google
21 Voice -- paid Google Voice services in Florida and
22 whether or not they're a registered dealer and/or
23 paying CST in Florida. I'm not discouraging
24 because they may be doing that or they may not be
25 providing the service for a fee in Florida.

1 Obviously we've heard discussion that that's a use
2 tax issue as well.

3 And one of the options I thought about along
4 these lines that's very similar to the sales tax
5 concept we're talking about is having an option or
6 a recommendation to legislature that if they're
7 going to look at doing something in the remote
8 sales tax world in the next session or beyond, that
9 they consider earmarking any new revenues from that
10 towards a reduction of the communication services
11 tax because --

12 **MR. RESNICK:** Sales tax on sales on the
13 Internet?

14 **MR. DUDLEY:** Right. You know, there's a big
15 discussion about that. There does seem to be some,
16 and I'd have to ask Bob, there does seem to be
17 some discussion or dispute about whether that, how
18 big a revenue number that would generate for the
19 state. But, you know --

20 **MR. SUGGS:** Didn't they say last year about
21 400 million?

22 **MR. DUDLEY:** If it's 400 million, you can
23 certainly do a lot with 400 million in terms of
24 replacing and lowering this rate down to the point
25 that now you've expanded the base and you might get

1 to a rate closer to the sales tax and still have
2 money to distribute to local governments, gross
3 receipts and sales tax. I just point that out
4 because there's clearly a nexus. The person that's
5 getting communications service is the one that's
6 orderer stuff online. I mean, there is a clear
7 nexus there to that customer. So I know there's
8 been a lot of discussion about that. But that is
9 another option of looking at ways to encourage the
10 legislature to think about CST a little more
11 globally to the point that's being raised about a
12 sales tax application. So I just put that out
13 there.

14 **MR. SUGGS:** Can I just --

15 **MR. STRANBURG:** One last thing, and then we're
16 going to take our lunch break.

17 **MR. SUGGS:** Okay. I'll make it two parts.
18 Kathleen -- here's what's happened in the last two
19 years, it's sort of a sales tax swap in what me and
20 Amber encountered. There have been proposals that
21 never have gotten on the shelf in the house in
22 terms of swapping sales tax for property tax for
23 schools.

24 And before then, there was Rubio's pending.
25 That was probably back in '04, '05. So it's not

1 unheared of. It goes back to -- it gets to our
2 number one, that I think more than the number -- I
3 think what I'm hearing from the city is the number
4 that's on the sheet of paper that comes from the
5 Department that we get, there's some added value
6 there also in terms of consideration for those
7 things. But I -- in terms of, I mean, it's an
8 option that if the state really wanted to -- and
9 again, I know Marshall is here and the DOR. But in
10 terms of legislators, if they really want to fix
11 the problem, solve the problem for themselves, they
12 need to create more revenue. But I mean, you know,
13 we got this thing out here like CST, but we got gas
14 taxes. I mean, if somebody, depending on what
15 county you're in, you're paying 12, 13 cents on a
16 gallon of gas. I mean, but they can make that go
17 away, too, but they don't because they know -- it's
18 sort of -- it's just sort of the perspective for
19 what we do. But I -- because it gets -- at the end
20 of the day, whatever that number is, what that
21 number is comprised of from my guys, if it is
22 straight what we're getting now -- if what we're
23 getting now at capacity and then there's added
24 value for use of my right-of-way or whatever, I can
25 translate it to a number, and that's where we need

1 to get.

2 How we need to get there and, I mean, the
3 theory is one thing we -- and you guys -- Sharon
4 said is very important. For my guys even to put
5 up, we may set aside on local discretion. And she
6 said, there's a big difference what we're giving
7 up. If we say we're to consider to make the thing
8 work, giving up local discretion and local control
9 because that stuff does happen, we fight it every
10 year. Charlie, you see me and Amber running
11 around, is that some we don't have local control
12 of, some there's a formula in the hands of the
13 legislature, it only takes one person to tweak it a
14 tenth of a percent. And now I got to get all -- it
15 consumes my entire life because --

16 **MR. DUDLEY:** Right.

17 **MR. SUGGS:** So there's that value that we're
18 giving up -- giving up local discretion and
19 trusting it in the hands of a term-limited
20 legislature.

21 **MR. DUDLEY:** Right. Because they could go
22 into session this year and repeal the local CST,
23 right?

24 **MR. SUGGS:** They could, yeah.

25 **MR. DUDLEY:** And be gone. They could do that.

1 I mean, I know they'd have to go by super majority
2 to get around the Constitutional mandate, but they
3 could. I mean, they --

4 **MR. RESNICK:** They could also triple it,
5 right?

6 **MR. DUDLEY:** Exactly.

7 **MR. RESNICK:** I mean, they can to do anything
8 they want to do, right?

9 **MR. DUDLEY:** It could be adjusted. I
10 understand that.

11 **MR. SUGGS:** So, just --

12 **MR. RESNICK:** I guess the only thing they
13 can't touch is something that's in the
14 Constitution, right?

15 **MR. DUDLEY:** Maybe a bonded --

16 **MR. SUGGS:** I do want you guy to understand
17 even though -- you heard where we're at. It's on
18 the table, but there's a value -- don't under
19 estimate the value of giving up local discretionary
20 control and fees and depending on the legislature
21 that has been very unfriendly with the local
22 governments I mean, for a while.

23 We can go to lunch.

24 **MR. STRANBURG:** I appreciate that. Please
25 remember when we come back, we will need to approve

1 the minutes. If you could take a look at them and
2 see if there any changes you want to make. And
3 let's be back and going at 1:30, so that we get
4 Brian out of here on time. Thanks.

5 (Lunch recess.)

6 (End of Volume I.)
